WELCOME TO VIPA

GESELLSCHAFT FÜR VISUALISIERUNG UND PROZESSAUTOMATISIERUNG MBH

VIPA has traditionally been amongst the most innovative suppliers of memory-programmable controllers (PLCs) in the market and is growing worldwide, with double-digit growth rates. Therefore, VIPA belongs to the still young, but also exceptionally successful companies in the Automation market.

Our success is based on five pillars:

- ▶ High rate of innovation and quick decision making
- ▶ Various unique features
- ▶ A convincing cost-performance ratio
- ▶ Commitment and competence of our employees
- ▶ Cooperation with powerful partners.

Our aspiration:

- ▶ Constantly continue to improve existing technologies, but also to introduce new and innovative trends in the market
- ▶ Continuous flexible adaptation of our products to current market needs and to further increase our market acceptance
- ▶ Continue to develop our personnel resources in sales, development, quality assurance and service in accordance with our revenue growth
- ▶ Enter into cooperation agreements with powerful partners and to increase our market share through joint market cultivation.

To meet this aspiration, we consider it as our aim, also in the future to improve what is established, to question, revise or develop completely from new.

Furthermore we want to make available to our partners and customers also in the future through continuous innovation and smart system maintenance unique technological features with which together we can gain new and satisfied system users.

With our highly motivated employees, we're working hard on improving our quality, service and the satisfaction of our customers and partners. Convince yourself of the possibilities that our automation solutions and systems offer, and discover how with us you can sustainably increase your competitiveness.

Strengthened by above-average growth, we are determined to continue our successful path in the future.

We look forward to cooperating with you!

SYSTEM SLIO

the fine-granular I/O system

System description SLIO

Structure and Concept

SLIO stands for Slice I/O. The system is very compact and will be adapted piecemeal exactly to the requirements of the application.

The system is designed for decentralized automation tasks.

With the help of the power module (PM), color contrasted from the signal modules (SM) and functional modules (FM), these are supplied with power and separate potential groups can be defined as required. The terminal module (TM) combines clamp, seating for the electronic module (EM) and mechanical bus connector. The electronic modules are connected to the terminal module in a secure sliding mechanism. In the case of service, only the electronic module is replaced by simply pulling out of the terminal module – wiring and mounting remain on the 35 mm profile rail. The step-formed spring-type terminals on the terminal module enable a quick, clear and secure wiring. Through integrated status LEDs and the label strip on the front a channel-specific, unambiguous allocation, and readability of the channel conditions of the electronic module is ensured.

All interface modules (IM) for PROFIBUS-DP, CANopen, PROFINET, EtherCAT and Modbus support up to 64 electronic modules.

The space-saving assembly size allows use in any automation environment.

Assembly is very easy: First the terminal modules are connected, then the electronic modules are inserted into the slot designated for the terminal module until the connection between both module parts is established by an audible click.

The System SLIO is one of the most highly efficient decentral systems worldwide and is evolving daily.

Performance and Application

The System SLIO is designed for large decentralized automation tasks in the manufacturing and process industries. The system expands SLIO key solutions and is integrated with the help of the device master files into existing fieldbus infrastructure. Through the new backplane bus concept the interface modules (fieldbus slave) in the System SLIO enable very short response times for signal processing.

Functions

A variety of signal modules are available for the connection of sensors and actuators for acquiring digital and analog signals to and from the process.

For positioning, path measurement, counting tasks and other functions further functional modules are continuously being developed

Communication

The System SLIO includes interface modules (fieldbus slave modules) with different fieldbus protocols by which the system, manufacturer-independent, can be integrated into most automation concepts.

SYSTEM 100V

the compact control system

System description 100V

Structure and Function

The System 100V is a very compact control system.

The system is designed for centralized and decentralized automation tasks.

The compact CPUs unify interfaces for communication and digital I/O peripherals in a casing.

By the use of up to four expansion modules the CPUs can be extended by up to 160 analog and digital I/O points.

With its space-saving assembly size it fits into almost any automation environment.

The System 100V is immediately usable central and decentral without further components. The installation of the system and the enlargement of the periphery is extremely simple. The CPU is clipped onto a standard 35 mm profile rail. If the CPU needs to be expanded bus connectors are used for communication between the CPU and expansion modules on the profile rail in advance, after that the CPU and the System 100V/200V expansion modules are snapped on - finished.

The scope of supply includes front connectors, labeling strips and, in the System 100V expansion modules, also bus connectors.

Performance and Application

The System 100V is designed for centralized and decentralized automation tasks in the manufacturing and process industries for the lower performance range.

Programming

The System 100V is programmed with WinPLC7 or with Siemens STEP7 in LAD, FBD and STL.

Memory

The CPUs in the System 100V have the work and load memory already integrated. Depending on the CPU version, users can choose from 8 kByte to 32 kByte work memory. In addition, MMC cards for storing program and data are supported.

Functions

For the connection of sensors and actuators a variety of signaling modules in the System 100V, and System 200V for acquiring digital and analog signals in and out of the process is available. Most of the signal modules from the System 200V are bus and functionally compatible to the System 100V.

Depending on the CPU, variant counter inputs and PWM outputs are integrated. Due to the counter inputs, complex and fast counting tasks in the manufacturing and process industries will be economically realized. The adjustable PWM outputs via potentiometer allow, for example, CCFLs to be „dimmed“ or the speed of appropriate electric motors and fans to be regulated via impulses.

Communication

For the connection of serial devices, e.g. scanner or printer, and for the integration of systems from other manufacturers, different CPU variants are available with integrated interfaces. The System 100V provides fieldbus slave modules for PROFIBUS-DP and CANopen, with which the system also serves as manufacturer-independent, central, but also as subordinate decentralized fieldbus slave unit.

The fieldbus slave modules are integrated via the device master files into existing fieldbus infrastructure.

SYSTEM 200V

the modular control system

System description 200V

Structure and Concept

The System 200V is a highly compact and modular expandable system.

The system is designed for centralized and decentralized automation tasks.

With a central extension of a maximum of 32 modules directly to the CPU and up to 126 fieldbus slave modules with a further maximum of 32 modules per fieldbus slave module, the System 200V is highly flexible. The module size allows use in almost any automation environment.

The assembly is extremely simple. The bus connector for communication between the modules and the CPU can be easily inserted into a 35 mm standard rail, and then the System 200V modules are snapped on – finished.

Included with the supply of the signal and function modules are front connectors and labeling strips.

Performance and Application

The System 200V is designed for centralized and decentralized automation tasks in the manufacturing and process industry up to medium power range.

Programming

The System 200V is programmed with WinPLC7 or with Siemens STEP7 in LAD, FBD and STL.

Memory

The CPUs in the System 200V have the work and load memory already integrated. Depending on the CPU version, users can choose from 32 kByte to 128 kByte work memory. In addition, MMC cards for storing program and data are supported.

Functions

For the connection of sensors and actuators, a variety of signaling modules are available for acquiring digital and analog signals in and out of the process.

For positioning tasks and path measurement various SSI, servo and stepper modules can be chosen.

The counter modules in the System 200V also support complex and fast counting tasks in the manufacturing and process industry to calculate the comparative features and the connection of sensors, such as photoelectric barriers.

Communication

For the connection of serial devices, e.g. scanner or printer, and for the integration of systems from other manufacturers, the system offers a full complement of serial communication processors.

Ethernet communication processors incorporates the System 200V horizontally and vertically into the existing network structures, and thus make all relevant data connected to the MES and ERP systems available.

The System 200V possesses fieldbus master and slave modules with various fieldbus protocols and can therefore function, manufacturer-independent, as master control as well as subordinate fieldbus slave unit.

SYSTEM 300S

the High-Speed control system

System description 300S

Structure and Concept

The System 300S is both a compact and a modular expandable system.

The System 300S is designed for centralized and decentralized automation tasks in the manufacturing and process industry up to the highest power range.

With a central extension of up to 32 modules directly to the CPU and up to 126 fieldbus slave modules, it is deployable almost anywhere. The module size allows use in almost any automation environment.

The assembly is extremely simple. First, the backplane bus connectors for communication between the modules and the CPU are entered from behind and then the modules are individually placed and secured on the rail and screwed down.

The backplane bus connectors are supplied with the I/O modules. In the SPEED-Bus, the bus connection takes place via a SPEED-Bus terminal strip (PCB) integrated in the profile rail. The SPEED-Bus modules are mounted on the left of the CPU - depending on bus length 2, 6 or 10 SPEED-Bus modules can be deployed.

Performance and Application

The System 300S is designed for centralized and decentralized automation tasks. The integrated SPEED7 ASIC System 300S is among the world's fastest automation systems. A wide range of CPU options makes the system universally deployable. The selection ranges from C-class CPUs with integrated I/O peripherals for smaller applications up to CPU versions with built-in Ethernet, fieldbus master interfaces, and High-SPEED-Bus.

The CPU versions with integrated SPEED-Bus have been especially developed for automation tasks with very high demands on performance. Furthermore special high-speed modules for communication and for digital as well as analog signal processing are available.

Programming

System 300S is programmed with WinPLC7 or with Siemens STEP7 in LAD, FBD and STL.

Memory

The CPUs in System 300S have the work and load memory already integrated. Depending on the CPU-memory variant of the different users are available. The work and load memory can be adapted to the needs of memory card by plugging in an MCC memory expansion card. To back up program and data standard MMC cards are also supported.

Functions

For the connection of sensors and actuators, a variety of signal modules are available for recording digital and analog signals into and out of the process is available - also known as high-speed modules for SPEED-Bus.

Measurements and the control of pressures, temperatures, flow rates and levels are realized at the highest level with the measurement and control modules.

Communication

An Ethernet programming interface is integrated on all CPUs in System 300S. Ethernet communication processors link System 300S horizontally and vertically into network structures. Therefore, all relevant data are made available to the connected host systems.

System 300S offers fieldbus master and slave modules with different fieldbus protocols to can and to act as a master controller or as a subordinate fieldbus slave unit.

Multi-master applications with very high performance of communication can be implemented via the fieldbus master module for SPEED-Bus.

SYSTEM 500S

the PC slot PLC system

System description 500S

Structure and Concept

The Slot-PLC, based on the SPEED7 technology is designed for use within the core of a PC with a PCI interface.

System 500S can be extended with up to 124 PROFIBUS-DP slave stations. Thereby all systems from VIPA can be used with PROFIBUS-DP slave peripherals.

The CPU is supplied with power externally, for example with an interconnected UPS, thereby autarchic operation is possible and the operation of the CPU is also secured during a power outage.

Operation and monitoring of the CPU are supported by the program „PLCTool“. The tool provides schematic representation of a CPU from System 300S with all status LEDs on the PC monitor.

An OPC server for communication between the CPU and PC is included in the delivery.

Due to the module size, the CPUs fit into any standard desktop PC.

Performance and Application

System 500S is designed for centralized automation tasks for application within a PC with a PCI interface. It covers all requirements in the manufacturing and process industries up to the highest power range. With System 500S CPU integrated SPEED7 ASIC the system is among the fastest automation systems worldwide.

Programming

System 500S is programmed with WinPLC7 or with STEP7 from Siemens in LAD, FBD and STL.

Memory

The CPUs in System 300S have the work and load memory already integrated. Depending on the CPU-memory variant of the different users are available. The work and load memory can be adapted to the needs of memory card by plugging in an MCC memory expansion card. To back up program and data standard MMC cards are also supported.

Functions

Signal, communication and function modules, and devices with PROFIBUS-DP slave interfaces are connected via the integrated PROFIBUS-DP master interface.

Communication

An Ethernet programming interface is integrated on all CPUs in System 500S. The integrated Ethernet communication processor CP 543 or a Network card integrated in the PC link System 500S horizontally and vertically into network structures. Therefore, all relevant data is made available to the connected host systems. The CPUs in System 500S already have a PROFIBUS-DP master interface integrated, therefore the system can act, manufacturer-independent, as master control.

Operate and Control Systems

System description HMI

Structure and Concept

The VIPA Touch Panel with 5.7" to 12.1" display, Windows CE 5.0/6.0 and visualization system can be used universally. The touch panels are equipped with Windows Embedded CE and the visualization software Movicon Real Flexible or zenon. The VIPA Commander Compact CC 03 with two-line display and integrated PLC-CPU is the ideal device for small control and operating tasks. The VIPA Operator Panel OP 03 and the Text Display TD 03 are universal operating units for use with VIPA systems and other control systems with MPI interface.

The following is required for operation:

- ▶ Editor/parameterization (+ programming software in Commander Compact CC 03)
- ▶ Data cable (depending on device type MPI, USB or Ethernet cable)
- ▶ Memory card where appropriate
- ▶ Protective foil where appropriate

Performance and Application

The operating and monitoring devices from VIPA are universal in the manufacturing and process industries, but can also be used in building automation. The line displays and touch panels are designed both for watching and for the active use of machinery, plant and buildings.

Parameterization and Programming

The Text Display TD 03 is configured with the free tool, TD-Wizard *). The Operator Panels OP 03 and Commander Compact CC 03 devices are configured with OP-Manager *) or alternatively with Siemens ProTool. The PLC CPUs integrated in Commander Compact CC 03 are programmed in addition with Siemens STEP7.

The basis for the touch panels are Windows Embedded CE operating systems from Microsoft. Then the applications and visualizations offered by VIPA (also partially their own) are ported. The user can choose between two powerful visualization systems: Movicon Real Flexible and zenon. VIPA Touch Panels are shipped with pre-installed operating system and a visualization system corresponding to the selected runtime. The project, created with the appropriate editor on the PC, is transferred via data cable or memory card from the PC to the Touch Panel.

Memory

The Text Display TD 03 has no built-in memory. The messages, generated with TD-Wizard, are stored in the CPU. The Operator Panel OP 03 and the Commander Compact CC 03 devices make 256 kByte work memory available for projects. Incorporated in the Commander Compact CC 03 devices is an additional 16 kByte work memory for the PLC program. The touch panels offer up to 2048 MB of user memory (depending on the model). External expansion of the memory can easily be achieved by inserting a CFII or MMC-/SD-Card.

Functions

Depending on the device type different and very versatile functions are realizable. The Text Display TD 03 is provided primarily for the simple presentation and the acknowledgement of messages. With the Operator Panels OP 03 advanced operating and monitoring tasks are already being realized with their own projects deposited in OP 03. Touch panels have multi-functional use. Depending on the application projects with up to several thousand variables will be realized on the PC. Thereby CPUs, higher-level systems and other devices are connected for the purpose of data collection, data sharing, visualization and operation.

Communication

The exchange of data with the CPUs occurs at TD 03 and OP 03 via MPI. The Commander Compact CC 03 devices combine display and operating elements as well as PLC CPU with I/O peripherals in one casing. They can thus be used completely self-contained.

Terms and conditions of sale and delivery

General

The general supply and delivery terms for products and services of the Electrical Industry published by ZVEI Frankfurt am Main are valid in their latest version as well as the addendum on extended retention of title. Court of jurisdiction: Erlangen.

In case they are not at your disposal, please ask for a printed copy or make a download from our homepage:

www.vipa.de -> contact -> terms of delivery.

The prices are quoted in Euro (€) ex works, without insurance, freight and packaging. They do not include any VAT.

Packaging cannot be returned.

VAT will be indicated separately according to legal regulations and at the respective valid rate.

Minimum Order Value

The minimum value for each order amounts to € 150,- net. Orders with a value less than € 150,- will be charged with a handling fee of € 20,- to cover costs.

Dispatch and packing costs

Export sales:

Dispatch will be organized on ex works basis with a forwarding agent/courier service named by customer; alternatively freight cost will be calculated and charged according to weight and/or volume on the basis of VIPA Germany's freight rates at local partners.

Domestic sales:

Order value to 1.000 €	= 10,00 €
1.001 € - 2.500 €	= 1,00% of net price
2.501 € - 5.000 €	= 0,85% of net price
5.001 € - 7.500 €	= 0,65% of net price
7.501 € and higher	= all inclusive 57,00 €

Freight charges for bulky goods (e.g. 2 m of rails and cable drums) are calculated separately.

Validity

With the date this price list comes into effect all former prices are no longer valid.

The price list may be subject to changes, especially as far as the values, dimensions and weights are concerned, if nothing different is noted explicitly.

The goods will be invoiced at the date of dispatch.

Manuals

When ordering modules, you will receive the corresponding customer documentation free of charge in PDF format on DVD. If you wish to receive hard copies of manuals, please order them separately.

The latest versions of all our manuals can be found on our homepage: www.vipa.de -> service -> manuals.

For further information please contact us:

Export sales: +49 (0)9132/744 - 1675 or -1670

Domestic sales: +49 (0)9132 / 744 - 1730
