FTK+
Duct sensor for humidity and temperature

Datasheet
Subject to technical alteration
Issue date: 01/11/2019 • A004

APPLICATION
Duct humidity and temperature sensor in new hinged lid enclosure USE for all HVAC duct applications. Designed for control and monitoring applications.

TYPES AVAILABLE

Duct humidity sensor temperature + humidity – active 2x 0..10 V
FTK+ <xxx> VV incl. MF20 (TPO)

Duct humidity sensor temperature + humidity – active 2x 4..20 mA
FTK+ <xxx> AA incl. MF20 (TPO)

<xxx>: 5.51/10.6/15.75 in.
Options: Additional passive temperature sensor (type VVS|AAS)
eg: PT100/PT1000/Ni1000/Ni1000TK5000/NTC10K... and other sensors on request.
**SECURITY ADVICE – CAUTION**

The installation and assembly of the device should only be performed by authorized personnel. The product should only be used for the intended application. Unauthorized modifications are prohibited! The product must not be used in relation with any equipment that in case of a failure may threaten, directly or indirectly, human health or life or result in danger to human beings, animals or assets. Ensure all power is disconnected before installing. Do not connect to live/operating equipment.

Please comply with:
- Local laws, health & safety regulations, technical standards and regulations
- Condition of the device at the time of installation, to ensure safe installation
- This data sheet and installation manual

**NOTES ON DISPOSAL**

As a component of a large-scale fixed installation, Thermokon products are intended to be used permanently as part of a building or a structure at a pre-defined and dedicated location, hence the Waste Electrical and Electronic Act (WEEE) is not applicable. However, most of the products may contain valuable materials that should be recycled and not disposed of as domestic waste. Please note the relevant regulations for local disposal.

**BUILD-UP OF SELF-HEATING BY ELECTRICAL DISSIPATIVE POWER**

Temperature sensors with electronic components always have a dissipative power, which affects the temperature measurement of the ambient air. The dissipation in active temperature sensors shows a linear increase with rising operating voltage. This dissipative power has to be considered when measuring temperature. In case of a fixed operating voltage (±0.2 V) this is normally done by adding or reducing a constant offset value. As Thermokon transducers work with a variable operating voltage, only one operating voltage can be taken into consideration, for reasons of production engineering. Transducers 0..10 V / 4..20 mA have a standard setting at an operating voltage of 24 V =. That means, that at this voltage, the expected measuring error of the output signal will be the least. For other operating voltages, the offset error will be increased by a changing power loss of the sensor electronics. If a re-calibration should become necessary later directly on the sensor, this can be done by means of a trimming potentiometer on the sensor board.

Remark: Occurring draft leads to a better carrying-off of dissipative power at the sensor. Thus temporally limited fluctuations might occur upon temperature measurement.

**APPLICATION NOTICE FOR HUMIDITY SENSORS**

Refrain from touching the sensitive humidity sensor/element. Touching the sensitive surface will void warranty.

For standard environmental conditions re-calibration is recommended once a year to maintain the specified accuracy.

When exposed to high ambient temperature and/or high levels of humidity or presence of aggressive gases (i.e. chlorine, ozone, ammonia) the sensor element may be affected and re-calibration may be required sooner than specified. Re-calibration and deterioration of the humidity sensor due to environmental conditions are not subject of the general warranty.

The declaration of conformity of the products can be found on our website https://www.thermokon.de/.

» APPLICATION NOTICE

After a certain time, dirt in the air can collect on the filter and then adversely affect the operation of the sensor. Under normal ambient condition an annual maintenance is recommended. Rinse the filter after cleaning with distilled water and dry it using clean oil-free air or nitrogen. Extremely contaminated filters should be replaced. At extreme ambient conditions, e.g. corrosive gases, the humidity sensor may have to be changed.
**CONNECTION PLAN AND CONFIGURATION**

Clamp ST+ | ST- : passive Sensor (VVS | AAS)

The adjustment of the measuring ranges is made by changing the jumpers in a de-energized state. The output value of the new measuring range is available after 2 seconds.

**Note (type FTK+ AA)**
When only using the temperature output, the humidity output must always be connected to mass/GND of the analog input module.

**MOUNTING ADVICES**

The sensor can be mounted into the ventilation duct with the mounting flange MF20 TPO. For risk of condensate permeation the pipe must be installed in a position that occurred condensate can run off.
» **DISMOUNTING ADVICES**

Remove the lower section of the sensor carefully and pulling straight out. **Pay close attention to the correct dismantling of the component!**

» **DIMENSIONS (IN.)**

![Dimensions Diagram]

» **ACCESSORIES (INCLUDED IN DELIVERY)**

- Mounting flange MF20 TPO  
  Item No. 612562
- Mounting kit universal  
  Item No. 698511
  - Cover screw + screw cover
  - 2 Rawlplugs
  - 2 Screws (countersunk head)
  - 2 Screws (rounded head)

» **ACCESSORIES (OPTIONAL)**

- Mounting base enclosure USE pure white  
  Item No. 667722
- Rawlplugs and screws (2 pcs. each)  
  Item No. 102209
- Filter stainless steel, wire mesh (spare part)  
  Item No. 231169
- Weather protection for FTK, FTK+, WSA (replacement)  
  Item No. 625241
- M16 Sealing inserts cable entry (packaging unit 10 pcs.) for wire with Ø 5/16”  
  Item No. 641340
