ROBO Cylinder® with Built-in Controller

ERC3 series

Why not use the
ROBO Cylinder® to
improve your production
efficiency further?

www.intelligentactuator.com

Transform your factory with the efficiency-improving, space-saving **ERC3 ROBO Cylinder®**.

FACTORY REVOLUTION

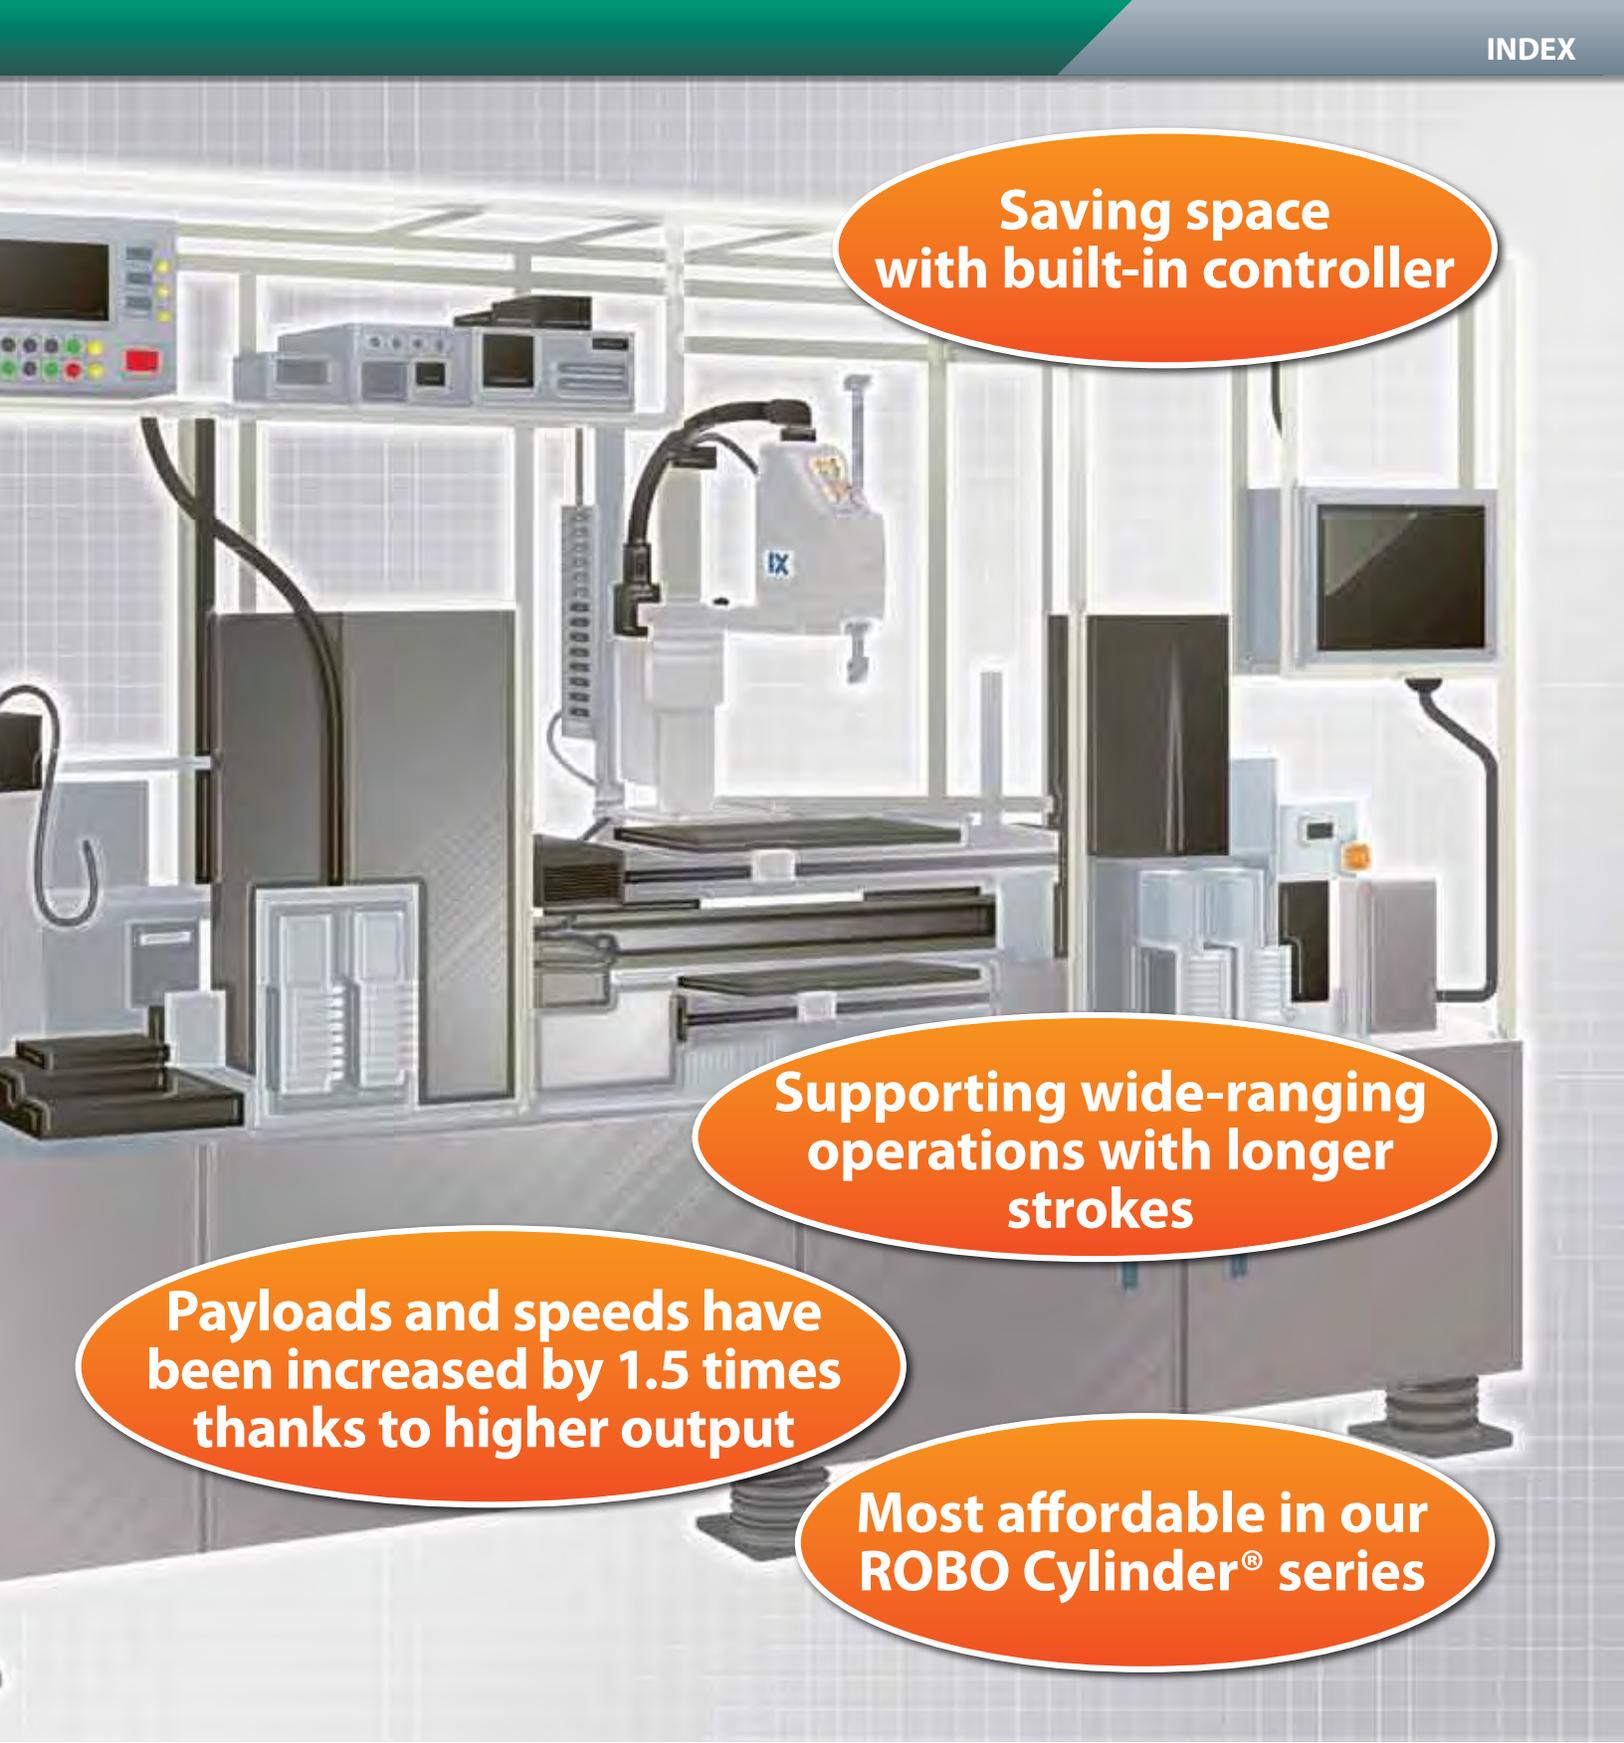

The key to a successful production process reform is selecting the right cylinder. If used effectively, the motorized "ROBO Cylinder®" will let you transform your factory by utilizing existing equipment.

Supporting Wide-ranging Applications

Product Lineup

The product lineup of IAI's ERC3 series with built-in controller is shown below.

Type	Slider type								Rod type									
	SA5C				SA7C				RA4C				RA6C					
External view																		
Section view (mm)																		
Stroke (mm)	50~800								50~300									
Ball screw lead (mm)	3	6	12	20	4	8	16	24	3	6	12	20	4	8	16	24		
Maximum speed (mm/s) ^{*1}	225	450	900	1120	210	490	980	1200	225	450	700	800	210	420	700	800		
Maximum payload (kg) ^{*2}	Horizontal		20	18	9	6.5	45	40	35	17	40	40	25	6	70	55	40	13
	Vertical		12	6	2.5	1	22	14	6	3	18	12	4.5	1.5	25	17.5	8	3
Page	P.17				P.19				P.21				P.23					

(Notes) All of the values shown above assume that the high-output setting is enabled.

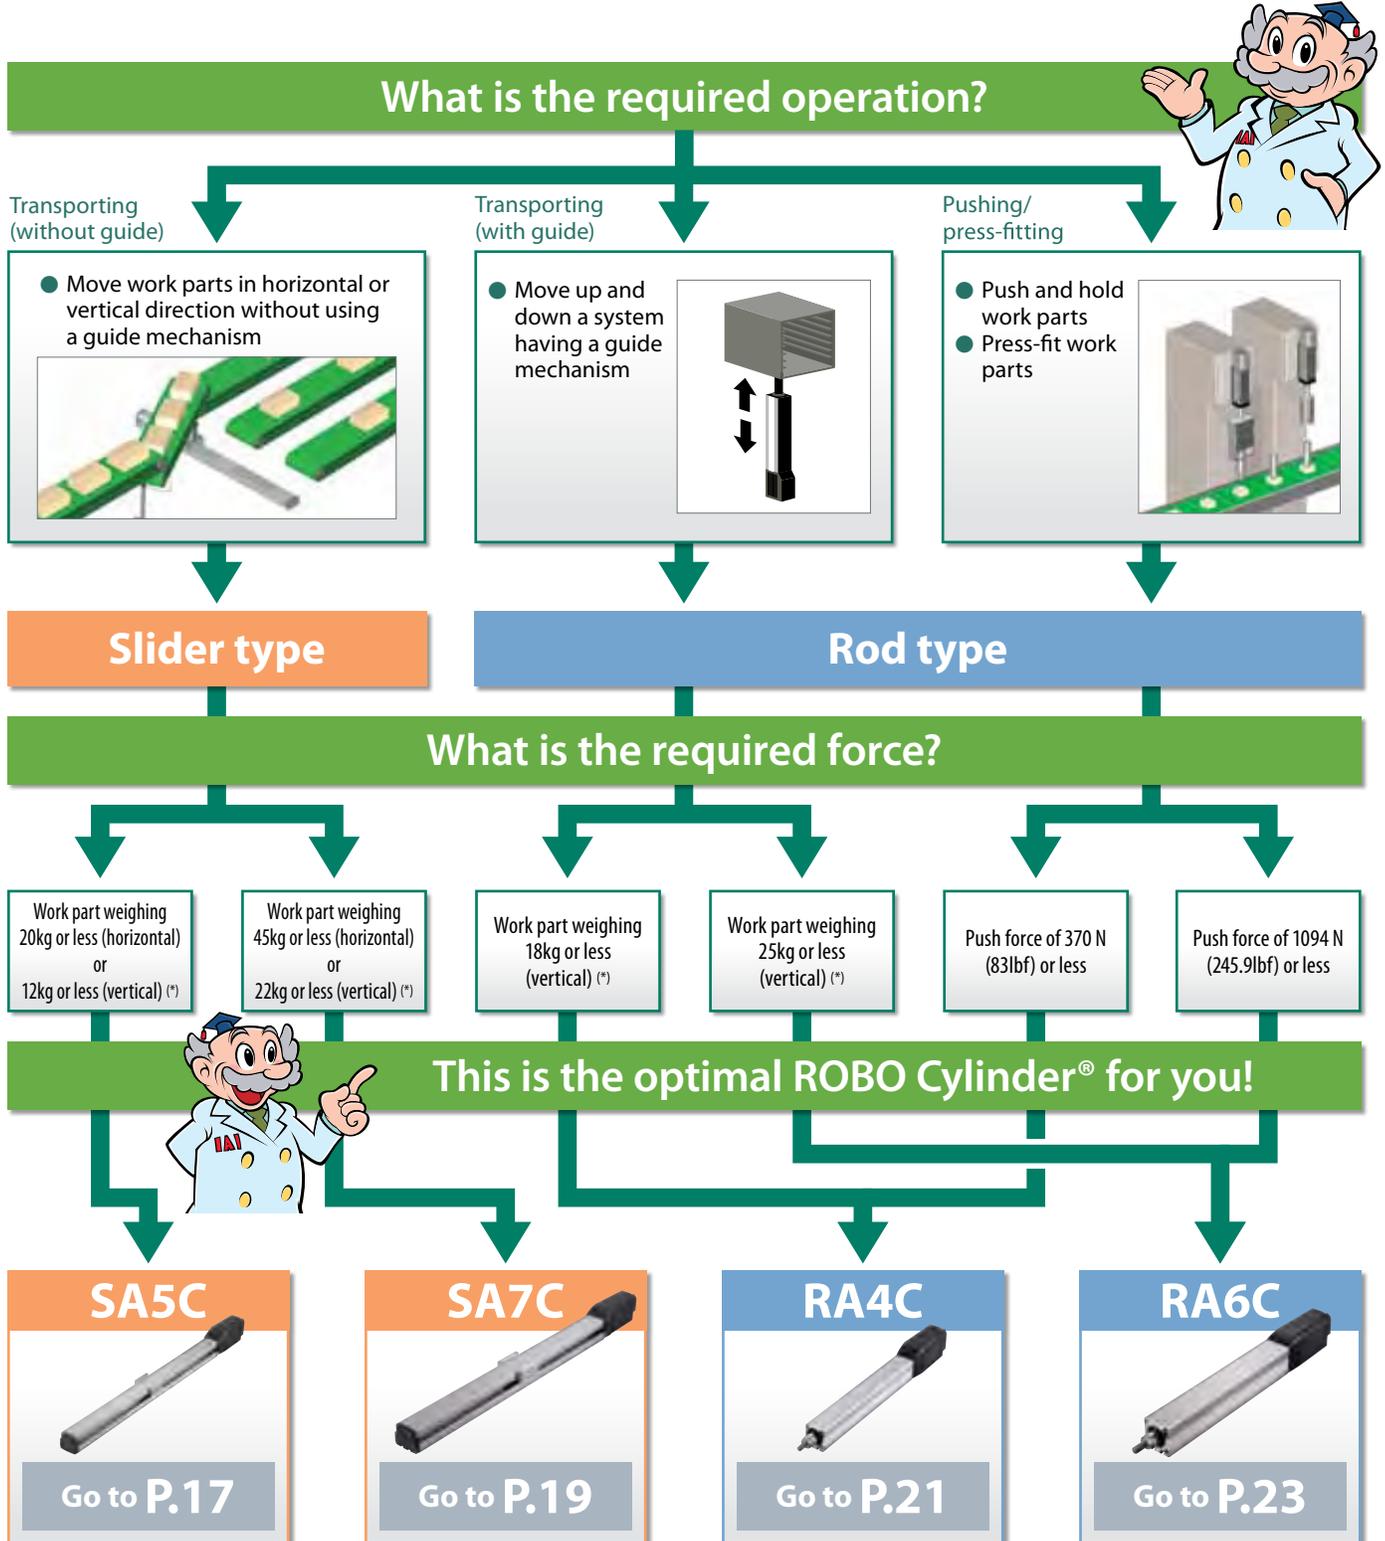

*1 The maximum speed may not be reached when the stroke is shorter. Also note that the longer the stroke, the lower the maximum speed becomes in order to avoid reaching a dangerous speed. For details, refer to the specification page of each model.

*2 The maximum payload is based on operation at the rated acceleration. The higher the acceleration, the lower the maximum payload becomes. For details, refer to the table of payloads by acceleration on P. 26.

Finding the Right Model from the Purpose of Use

Model Selection Guide **ERC3**

Select the right model in the ERC3 series by referring to the diagram of use conditions provided below.

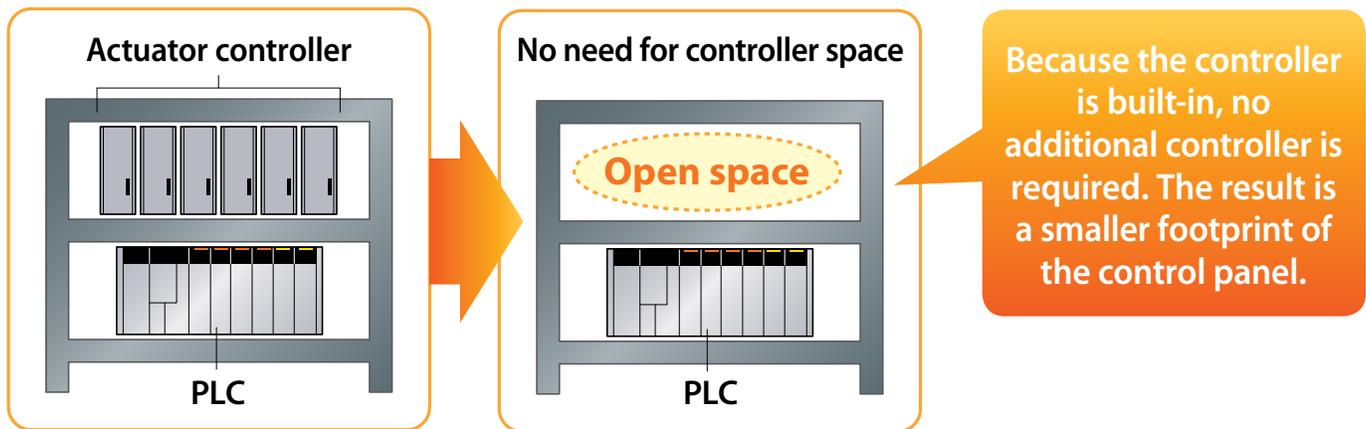

* When the high-output setting is enabled.

Feature 1 **Space-saving and High Performance**

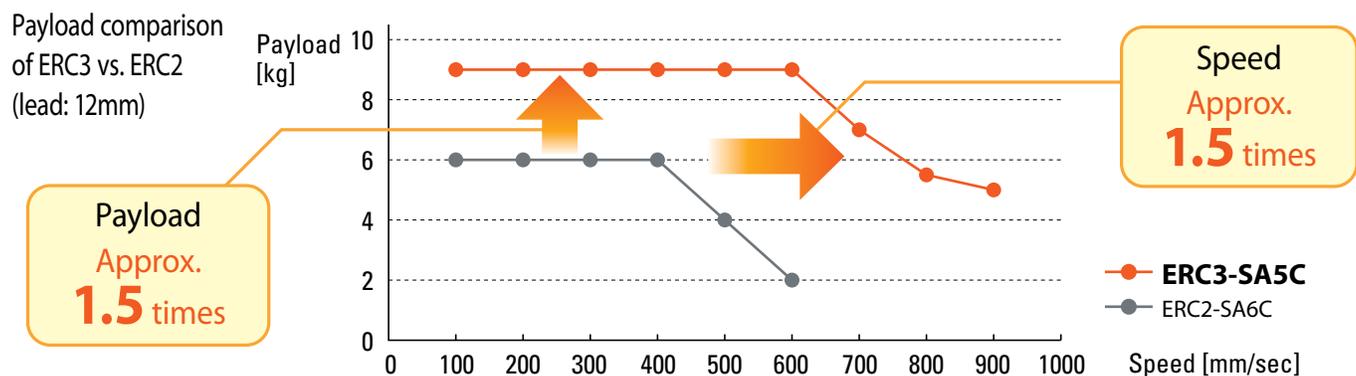

Great Features Made Possible

1. Saves space, allowing for effective use of equipment

- No space is required for installing the controller, so the control panel can be made smaller. A smaller control panel allows for effective use of space.

2. Approx. 1.5 times the payload and maximum speed of a conventional model

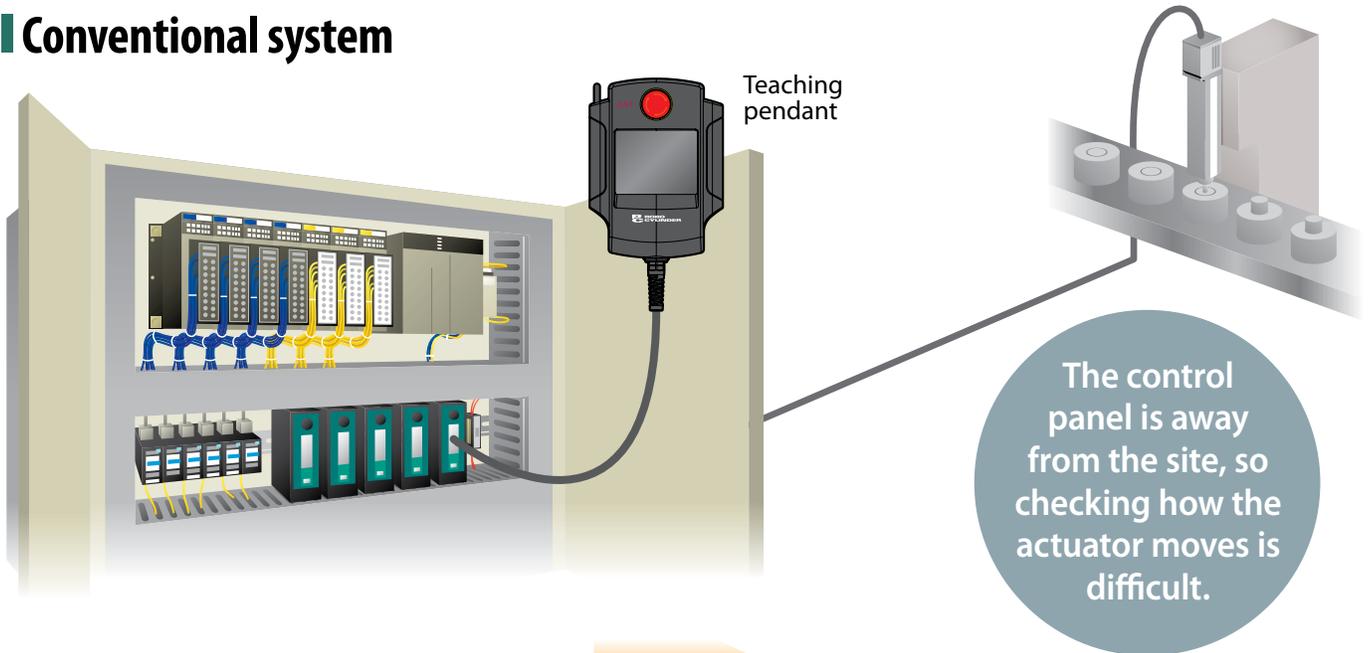

3. Longer maximum standard stroke

by the Built-in Controller **ERC3**

4 Teaching can be performed near the actuator because the controller is built-in.

Conventional system

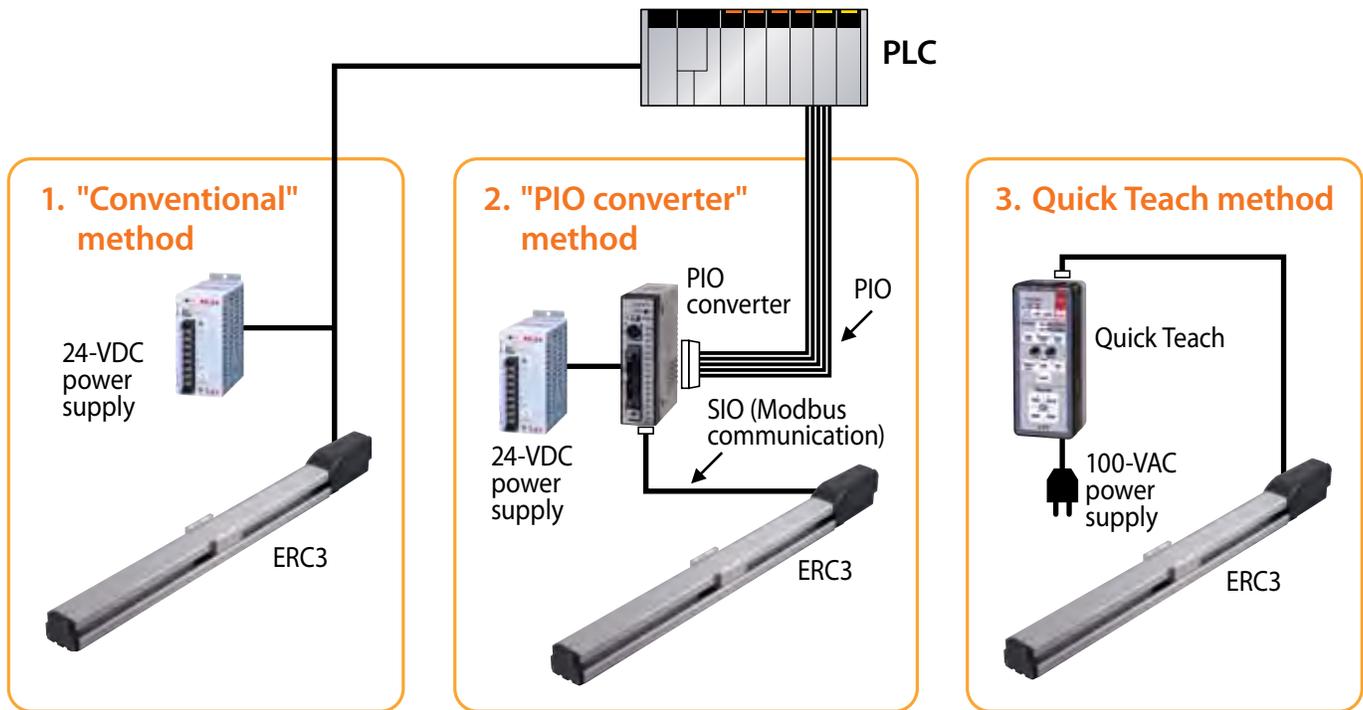

ERC3 series

Feature 2 Supporting Various Connection Methods

Built-in Controller Offering Excellent Scalability

Supporting 3 connection methods

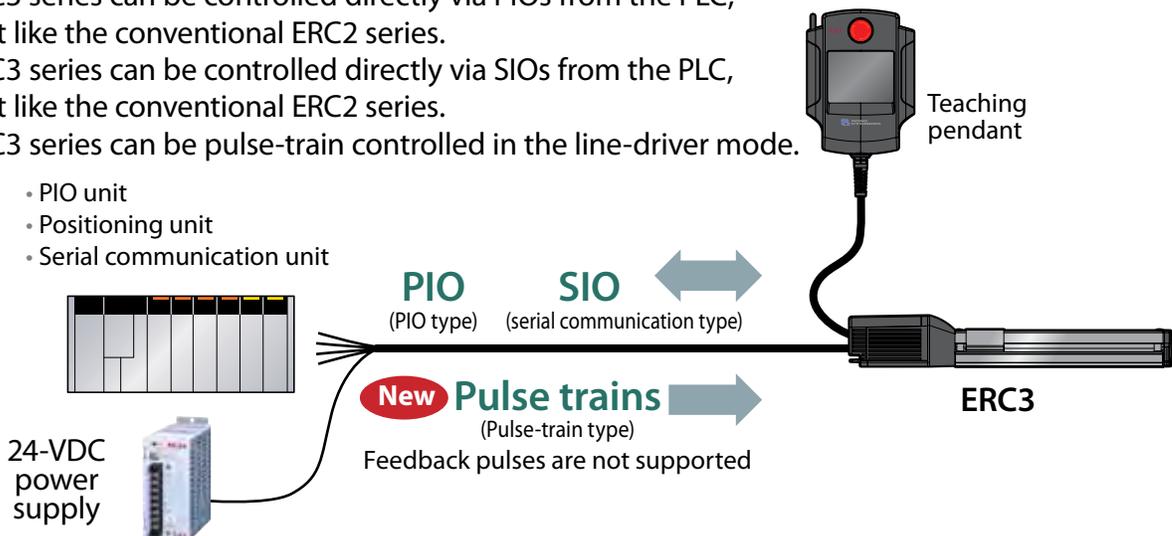

1. "Conventional" method

The ERC3 series can be connected to a PLC or other host device in the manner illustrated below. Up to 16 positioning points are supported.

- The ERC3 series can be controlled directly via PIOs from the PLC, etc., just like the conventional ERC2 series.
- The ERC3 series can be controlled directly via SIOs from the PLC, etc., just like the conventional ERC2 series.
- The ERC3 series can be pulse-train controlled in the line-driver mode.

- PLC
- PIO unit
 - Positioning unit
 - Serial communication unit

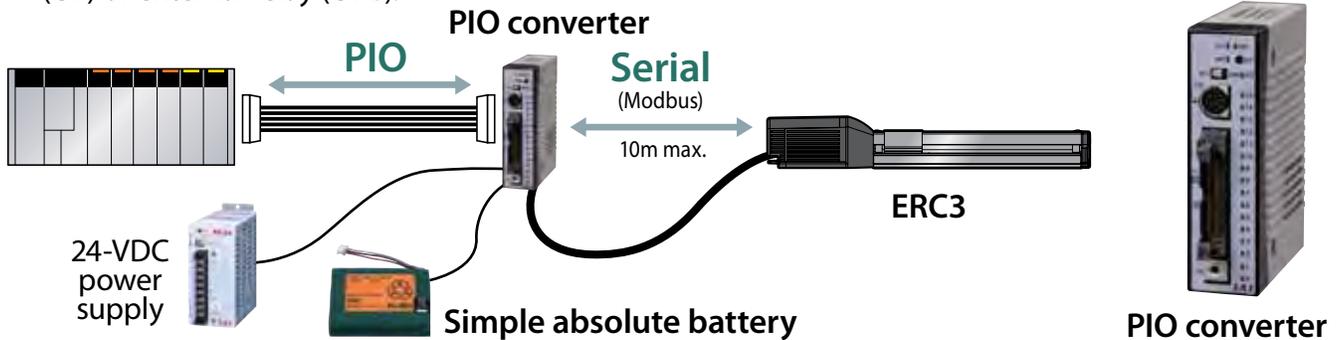

Actuator

2. "PIO converter" method

Various functions offered by the ERC3's built-in controller can be enhanced by connecting the PIO converter.

- All six PIO patterns will be supported and the maximum number of positioning points will increase to 512.
- The ERC3's encoder can be operated in the simple absolute mode.
- The drive source can be cut off using the built-in relay (CV) or external relay (CVG).
- Calendar function can be used.
- Equipped with a brake release switch for the ERC3.
- Various statuses of the ERC3 can be checked in a simple mode.

3. Quick Teach method

When the Quick Teach is connected, test runs can be performed without supplying power to the ERC3.

- Power can be supplied from the Quick Teach.
- Speed, acceleration and position can be changed.
- Power supply specifications of 24 VDC and 100/200 VAC are supported.*

The ERC3 series can be used in the way you are familiar with, but it also lets you enhance functions by connecting the PIO converter. (Refer to P. 9 for details.)

* The ERC3 series may not operate as specified if test runs are performed using the Quick Teach connected to a power-supply unit, with the high power output setting is enabled. (Position data can be edited without problems.)
 If you want to perform test runs with the high-output setting enabled, connect a 24-VDC power supply to the Quick Teach and disconnect the power-supply unit.

Attractive Option ①

Features of the PIO Converter

Realizing controller functions of the next higher class with the ERC3 series

When connected to the PIO converter, the ERC3 series can demonstrate functions equivalent to the RCP4 controller "PCON-CA." Use the PIO converter if you want to configure a high-function system using the ERC3 series, use the absolute function or monitor the status of the actuator.

PIO converter

POINT 1 Increased maximum number of positioning points

While the maximum number of positioning points supported by the ERC3 series' built-in controller is 16, it increases to 512 when the PIO converter is connected. Connecting the PIO converter also increases the numbers of I/O signals, allowing for complex controls and connection with peripheral equipment.

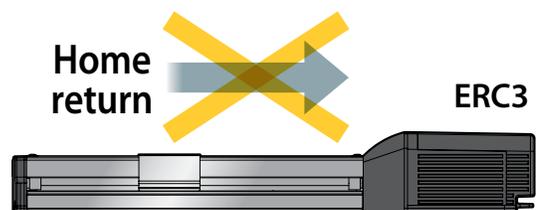

POINT 2 Supporting the simple absolute mode

The standard encoder of the ERC3 series is of the incremental type. Once the power is turned off, therefore, the actuator's current position is lost and the home return operation will be required next time the actuator is started. When the PIO converter is connected, the ERC3 lets you select the simple absolute mode. Home return operation is not required while the encoder is in the simple absolute mode, because the current position is in memory.

In the simple absolute mode...

Home return operation is no longer required

The actuator can be operated immediately after reconnecting the power.

* To use the simple absolute function, the separately sold PIO converter of simple absolute specification (with battery) is required.
* Only "Serial communication" can be selected for the I/O type.

Go to **P.37**
for details

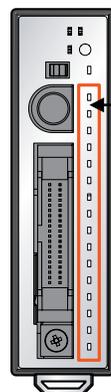

Use of the PIO converter is recommended if you want to fully demonstrate the performance potential of the ERC3 series.

POINT 3 Status LEDs indicating the operating status of the actuator

The PIO converter lets you check the following statuses using the status LEDs provided on the front panel (optional).

- Command current ratio
- Alarm code
- PIO input terminal status
- PIO output terminal status

Status LEDs

16 LEDs indicate the operating status of the actuator.

POINT 4 Calendar function for checking when errors occurred

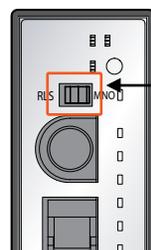

The PIO converter has a calendar function that lets you check the details of past alarms, such as when each alarm occurred, by connecting the teaching pendant and PC software to the PIO converter. This function is useful when analyzing alarms.

Data type	Code	Message	Date/Time	Time/Date	Alarm
Alarm code	FFF	Power ON Error	...	11/11/18	11:07:18
History 1	001	Control power voltage reduction	...	11/11/18	08:06:00
History 2	FFF	Power ON Error	...	11/11/18	08:06:00
History 3	001	Control power voltage reduction	...	11/11/18	08:06:00
History 4	FFF	Power ON Error	...	11/11/18	08:06:00
History 5	001	Control power voltage reduction	...	11/11/18	08:06:00
History 6	FFF	Power ON Error	...	11/11/18	08:06:00
History 7	FFF	Power ON Error	...	11/11/18	08:06:00
History 8	FFF	Power ON Error	...	11/11/18	08:06:00
History 9	FFF	Power ON Error	...	11/11/18	08:06:00
History 10	FFF	Power ON Error	...	11/11/18	08:06:00
History 11	FFF	Power ON Error	...	11/11/18	08:06:00
History 12	FFF	Power ON Error	...	11/11/18	08:06:00
History 13	FFF	Power ON Error	...	11/11/18	08:06:00
History 14	FFF	Power ON Error	...	11/11/18	08:06:00
History 15	FFF	Power ON Error	...	11/11/18	08:06:00

POINT 5 Brake release switch for at-will release of the brake

If your ERC3 actuator comes with a brake, the brake can be turned on/off freely using the brake release switch on the front panel of the PIO converter. To release the brake, turn the switch to the "RLS" position.

* If the actuator is used vertically, hold the actuator in place before releasing the brake.

Brake release switch

Brake released: RLS
Normal: NOM

Attractive Option ②

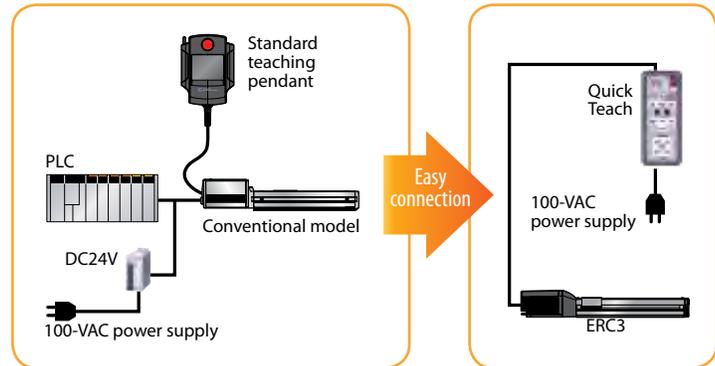

Features of the Quick Teach

 Go to **P.39**
for details

The ERC3 can be operated right away.

The Quick Teach lets you operate the actuator with ease using the buttons and knobs on the operation panel, without having to supply power or sending signals from a PLC. By using the Quick Teach, you can change the number of stop positions (2 points or 3 points) and each stop position, speed, and acceleration, and perform test run (forward/back movement and continuous operation).

* The above functions are available when the ERC3's controller type is set to the "MEC" mode. If the "CON mode" is selected, only the jog operation is available. Refer to P. 14 for the controller types.

Changing the acceleration/speed

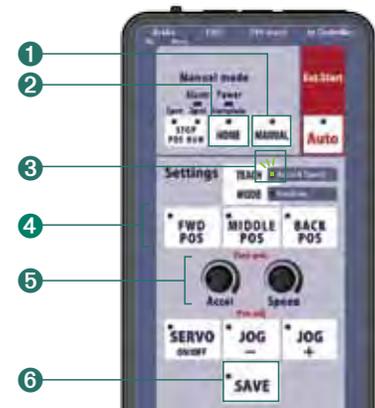

- 1 Press and hold the **MANUAL** button.
- 2 Press the **HOME** button.
- 3 Confirm that the **Accel & Speed** LED is lit.
- 4 Press the button corresponding to the stop position (**FWD POS/MIDDLE POS/BACK POS**) where you want to change the acceleration/speed.

* The **MIDDLE POS** button is available when the actuator is stopping at three points.

- 5 Turn the **Accel/Speed** knobs.

* You can use the knobs to change the acceleration and speed within a range of 1% to 100% of the rated acceleration/deceleration and maximum speed, respectively. The minimum speed may not be 1% of the maximum speed, depending on the actuator. Refer to the operation manual for the minimum speed.

- 6 Press the **SAVE** button.

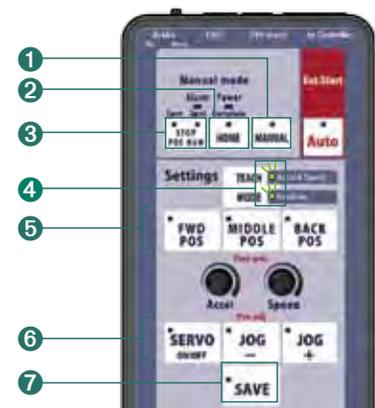

Changing the position

- 1 Press and hold the **MANUAL** button.
- 2 Press the **HOME** button.
- 3 Press the **STOP POS NUM** button and determine the number of stop positions.
- 4 Press the **TEACH MODE**. (Both the Accel & Speed LED and Position LED should illuminate.)
- 5 Press the button corresponding to the stop position (**FWD POS/MIDDLE POS/BACK POS**) where you want to change the position.

* The **MIDDLE POS** button is available when the actuator is stopping at three points.

- 6 Move the actuator to a desired position.
* You can jog the servo or turn off the servo and move the actuator by hand.
- 7 Press the **SAVE** button.

* Exercise caution because the conditions of the **Accel/Speed** knobs will also be saved together with the position.

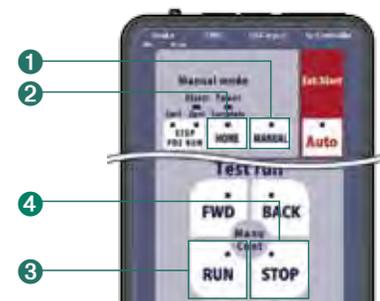

Performing test run (continuous operation)

- 1 Press and hold the **MANUAL** button.
- 2 Press the **HOME** button.
- 3 Press the **RUN** button.

* The actuator will move back and forth between the "forward position and back position" if it has been set to stop at two points.

The actuator will move repeatedly in the sequence of "forward position → middle position → back position → forward position" if it has been set to stop at three points.

- 4 Press the **STOP** button to stop the operation.

Explanation of the Operation Panel

HOME button

When the actuator is started, home return is performed first to confirm the coordinate position of 0mm.

MANUAL button

Press this button (and hold it for at least 1 second) to set the acceleration/speed or perform a test run.

AUTO button

Pressing this button disables the operation and all inputs from the operation panel buttons. It also enables PIO commands to the ERC3.

STOP POS NUM button

Press this button (and hold it for at least 1 second) to switch the number of positions between 2 and 3.

TEACH MODE button

Use this button to switch between modes 1 and 2 below:
 1. Acceleration/speed
 2. Acceleration/speed/position

Acceleration/Deceleration and Speed Settings

Use buttons in this area to set how you want the actuator to move.

FWD POS / MIDDLE POS / BACK POS button

Switch to a desired movement (among the following types):
FWD POS: The actuator moves toward the end position.
BACK POS: The actuator moves toward the home position.
MIDDLE POS: The actuator moves toward the middle position.

ACCEL / SPEED button

You can turn these knobs to change the actuator speed and acceleration within a range of 1% to 100% of the maximum speed and rated acceleration/ deceleration, respectively.
 * The minimum speed may not be 1% of the maximum speed. For the minimum speed, refer to the operation manual.

SERVO ON/OFF button

Use this button to turn on/off the motor power.

JOG- / JOG+ button

Use these buttons to jog the actuator in the negative and positive directions.

SAVE button

Pressing this button saves the speed, acceleration and position adjusted above.

Test run

Use buttons in this area to actually move the actuator and check the saved operation.

FWD button

In a 2-position travel, the actuator moves from the BACK position to the FWD position.
 In a 3-position travel, the actuator moves from the BACK position to the intermediate position, then to the FWD position.

BACK button

The actuator returns to the home position.

RUN button

In a 2-position travel, the actuator moves back and forth between the FWD and BACK positions.
 In a 3-position travel, the actuator repeats its movement from the BACK position, intermediate position, FWD position, then BACK position.

STOP button

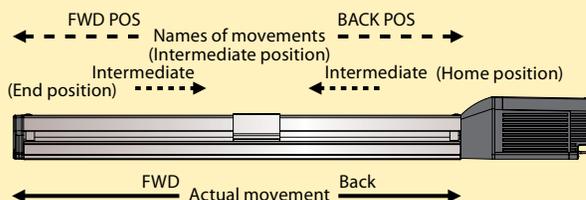

Stops the above operation.

I recommend using the Quick Teach if you want to operate your ERC3 right away.

Explanation of Terms

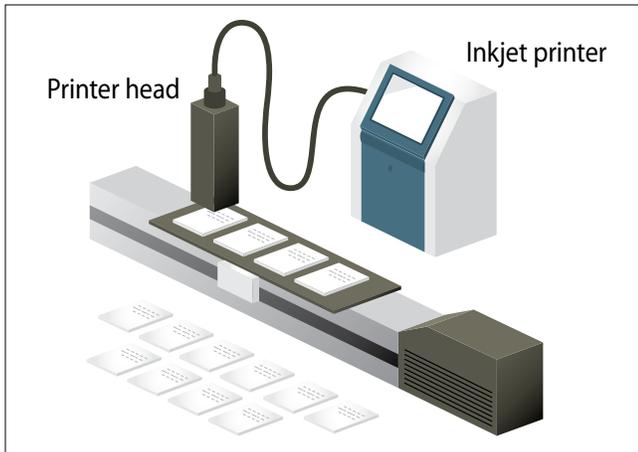

Useful in Various Situations

Application Examples

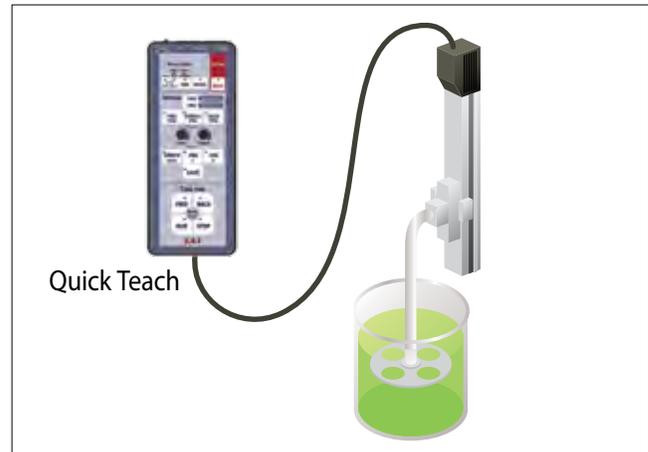

Slider type

Inkjet printer system

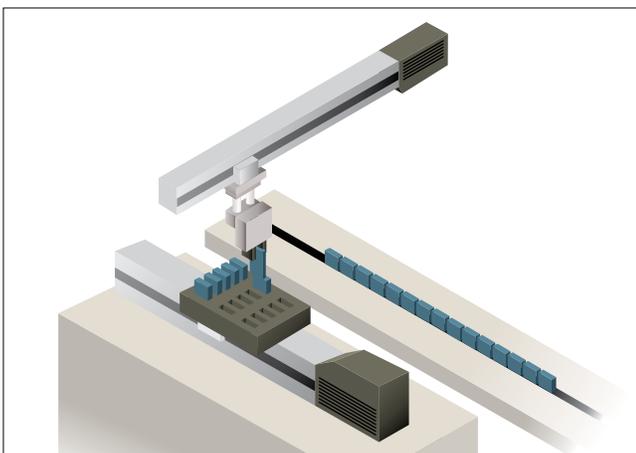

This system prints on components using an inkjet printer. The ERC3 is used to move components. Since the ERC3 can operate at a constant speed, stable printing quality can be achieved.

Liquid agitation system

Comprising of the ERC3 and the Quick Teach, this system is used to agitate a liquid such as a chemical agent. Use of the Quick Teach makes it possible to operate the system without a PLC and set the oscillation band and speed to the desired levels.

Component palletizing system

This ERC3-based system palletizes automobile components. Two axes are arranged separately to pick components and place them onto the pallet. The takt time can be reduced by performing approach and return at high speed and placement at low speed.

Product life test system

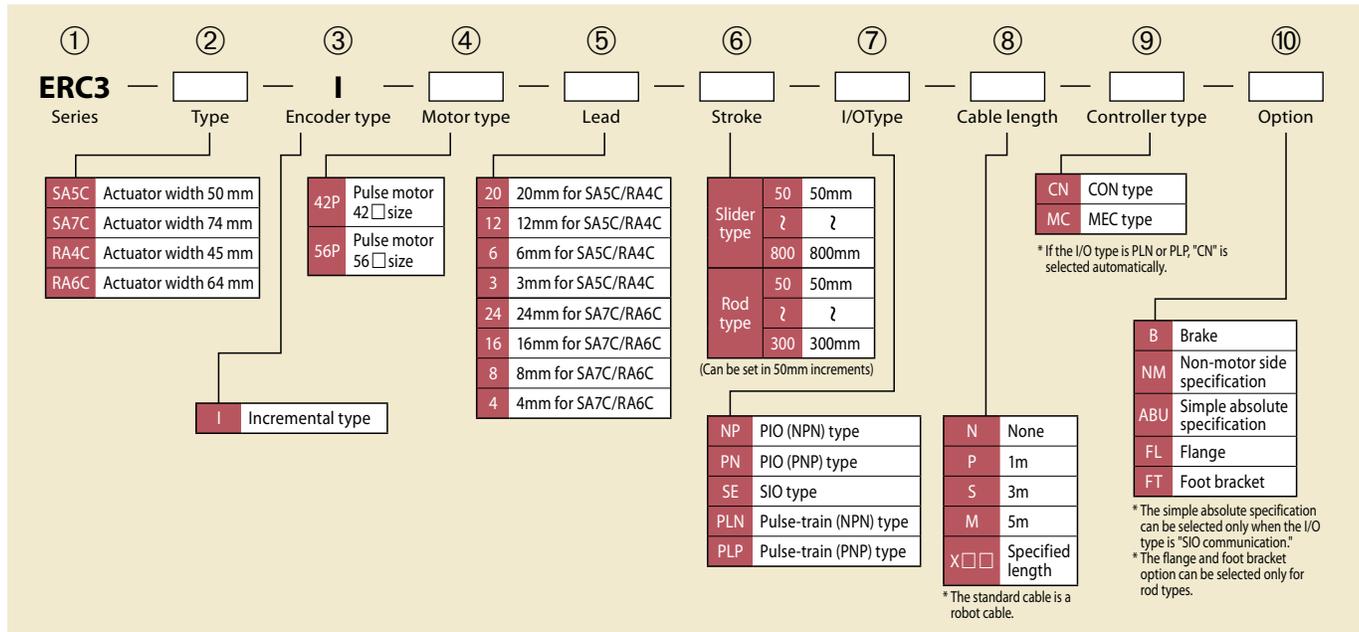

This ERC3-based system conducts life test on electronic equipment. The push speed and force can be changed according to the product.

Explanation of the Model Specification Items

The model number consists of the items specified below.

For the description of each item, refer to the applicable explanation provided below. Since the available selections (for lead, stroke, etc.) vary depending on the type, check the details on the page where each type is explained.

Explanation of items

① Series	Name of each series.										
② Type	The ERC3 series consists of the following four types of actuators. <table border="1"> <thead> <tr> <th>Type</th> <th>Actuator width</th> </tr> </thead> <tbody> <tr> <td>SA5C</td> <td>50mm</td> </tr> <tr> <td>SA7C</td> <td>74mm</td> </tr> <tr> <td>RA4C</td> <td>45mm</td> </tr> <tr> <td>RA6C</td> <td>64mm</td> </tr> </tbody> </table>	Type	Actuator width	SA5C	50mm	SA7C	74mm	RA4C	45mm	RA6C	64mm
Type	Actuator width										
SA5C	50mm										
SA7C	74mm										
RA4C	45mm										
RA6C	64mm										
③ Encoder type	Encoder equipped in the actuator. <table border="1"> <tr> <td>I: Incremental type</td> <td>Since the slider's position data is lost once the power is turned off, home return must be performed every time the power is turned on.</td> </tr> </table>	I: Incremental type	Since the slider's position data is lost once the power is turned off, home return must be performed every time the power is turned on.								
I: Incremental type	Since the slider's position data is lost once the power is turned off, home return must be performed every time the power is turned on.										
④ Motor type	Wattage of the motor installed in the actuator. Since the ERC3 series is driven by a pulse motor, the motor size (42P = 42 square motor) is indicated instead of the wattage.										
⑤ Lead	Lead of the ball screw (distance travelled by the slider as the ball screw makes one rotation).										
⑥ Stroke	Stroke (range of operation) of the actuator (unit: mm).										
⑦ I/OType	Type of connectable controllers. With the ERC3 series having a built-in controller, the I/O (input/output signal) type is indicated.										
⑧ Cable length	Length of the cable that connects the ERC3 series with the host system and options.										
⑨ Controller type	Two types of controllers are available: <ul style="list-style-type: none"> • CON type: At least eight positioning points (or at least 64 points when the PIO converter is used) are supported. • MEC type: The actuator can be operated with ease. As for positioning, the actuator stops at two points or three points. (Note) Switching between the CON type and MEC type is not possible after the shipment.										
⑩ Option	Options installed on the actuator. Refer to P. 15 for details. *If multiple options are selected, enter them in an alphabetic order. (Example: ABU-B-NM)										

Actuator Options

<p>■ Brake Model number: B</p>	<p>Applicable models ERC3-SA5C/SA7C/RA4C/RA6C</p> <p>Description A mechanism to hold the slider in place when the actuator is used vertically, so that it will not drop and damage the work part, etc., when the power or servo is turned off.</p>
<p>■ Non-motor side specification Model number: NM</p>	<p>Applicable models ERC3-SA5C/SA7C/RA4C/RA6C</p> <p>Description Select this option if you want to change the home position of the actuator slider or rod from the normal position (motor side) to the front side.</p>
<p>■ Simple absolute specification Model number: ABU</p>	<p>Applicable models ERC3-SA5C/SA7C/RA4C/RA6C</p> <p>Description This option is used to allow the actuator to operate without returning home first when the power is turned on. It can be selected only when the I/O type is "SIO communication (SE)." * The simple absolute battery is installed in the PIO converter (refer to P. 37), so the separately sold PIO converter of simple absolute specification is required.</p>
<p>■ Flange Model number: FL</p>	<p>Applicable models ERC3-RA4C/RA6C</p> <p>Description A bracket used to secure a rod actuator from the actuator side. The flange can be purchased separately later on.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="435 751 862 1079"> <p>ERC3-RA4C type</p> </div> <div data-bbox="911 751 1370 1079"> <p>ERC3-RA6C type</p> </div> </div>
<p>■ Foot bracket Model number: FT</p>	<p>Applicable models ERC3-RA4C/RA6C</p> <p>Description This bracket is used to affix the rod type with bolts from above the actuator. The bracket can be purchased separately later on.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="435 1234 862 1478"> <p>ERC3-RA4C type</p> </div> <div data-bbox="911 1234 1370 1478"> <p>ERC3-RA6C type</p> </div> </div>

Explanations of/Cautionary Notes on Items Specified in Catalog

1. Speed

"Speed" refers to the set speed at which to move the actuator slider (or rod). After accelerating from the stationary state and reaching the set speed, the slider continues to move at that speed until immediately before the target position (specified position) and then decelerates to a stop.

<Caution>

- ① The pulse motors used in the ERC3 series change their maximum speed depending on the transported mass. When selecting your model, refer to "Correlation diagrams of speed vs. payload" (on the page featuring each model).
- ② Regardless of whether the stroke is short or long, the set speed may not be reached if the travel distance is short.
- ③ The longer the stroke, the lower the maximum speed becomes in order to avoid reaching a dangerous speed. For details, refer to the "Stroke vs. Maximum Speed" table on the page featuring each model.
- ④ When calculating the travel time, consider not only the travel time at the set speed, but also the acceleration, deceleration and settling times.

2. Acceleration/Deceleration

"Acceleration" refers to the rate of change in speed until the stationary actuator reaches the set speed.

"Deceleration" refers to the rate of change in speed until the actuator traveling at the set speed comes to a stop.

Both are specified in "G" in programs (0.3 G = 2940 mm/sec²).

<Caution>

❶ The greater the value of acceleration (deceleration), the faster the actuator accelerates (decelerates) and consequently the travel time becomes shorter.

Note, however, that an excessively higher acceleration (deceleration) is a cause of error and malfunction.

❷ The rated acceleration (deceleration) is 0.3 G.

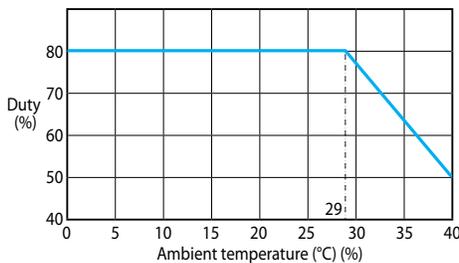

Although the upper limit of acceleration (deceleration) is 1 G (or 0.5 G in a vertical application), increasing the value of acceleration/deceleration reduces the payload.

3. Duty

With the ERC3 series, the duty is limited according to the ambient temperature to prevent the motor unit from generating heat. Operate the actuator at a duty ratio not exceeding the allowable value shown in the graph below.

<Caution>

The duty limits shown below assume that the high-output setting of the controller is enabled. If the high-output setting is disabled, the payload and maximum speed become lower, but the actuator can be used at a duty of 100%. Refer to the operation manual for information on how to change the high-output setting.

The duration of one cycle shall be assumed as follows:

Model	Duration of 1 cycle (T _M + T _R)
SA5C/RA4C	15 minutes or less
SA7C/RA6C	10 minutes or less

Notes:

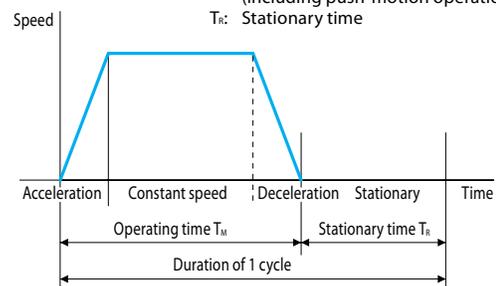

Do not operate the actuator at a duty ratio exceeding the allowable value. If the actuator is operated at a duty ratio exceeding the allowable value, the life of the capacitor used in the controller will become shorter.

[Duty ratio]

"Duty ratio" refers to the utilization ratio indicated by a percentage of the time during which the actuator operates in one cycle.

$$D = \frac{T_M}{T_M + T_R} \times 100(\%)$$

D: Duty
T_M: Operating time (including push-motion operation)
T_R: Stationary time

4. Installation

Check the installation orientation of each model in the table below.

○: Can be installed

Installation orientation	Installed horizontally and flat	Installed vertically Note 1	Installed on its side	Installed on the ceiling
Type				
SA5C, SA7C	○	○	○ Note 2	○
RA4C, RA6C	○	○	○	○

Note 1 If the actuator is installed vertically, orient it so that the motor is at the top whenever possible. If the actuator is installed with the motor at the bottom, no problems are anticipated during normal operation but if the actuator is not operated for a prolonged period of time, grease may separate depending on the ambient environment (especially when the ambient temperature is high), in which case base oil may flow into the motor and cause problems on rare occasions.

Note 2 If the actuator is installed on its side, it becomes more vulnerable to entry of foreign matters into the actuator or scattering of grease on the guide and ball screw from openings on the exposed side.

ERC3-SA5C

*Refer to P. 14 for the description of items constituting the model number.

Correlation diagrams of Speed and Payload

With the ERC3 series, due to the characteristics of the pulse motor, payload decreases as the speed increases. Use the chart below to confirm that the desired speed and payload requirements are met.

POINT Notes on selection

If the high-output setting is enabled (factory default), the duty must be limited. (Refer to P. 16.) If the high-output setting is disabled, the payload and maximum speed become lower, but the actuator can be used at a duty of 100%. Refer to the operation manual for information on how to change the high-output setting. Refer to P. 26 for the payload at each speed/acceleration when the high-output setting is enabled. For other cautionary items, refer to "Explanations of/Cautionary Notes on Items Specified in Catalog (P. 15)."

Correlation diagrams of Speed and Payload

With the ERC3 series, due to the characteristics of the pulse motor, payload decreases as the speed increases. Use the chart below to confirm that the desired speed and payload requirements are met.

POINT Notes on selection

If the high-output setting is enabled (factory default), the duty must be limited. (Refer to P. 16.) If the high-output setting is disabled, the payload and maximum speed become lower, but the actuator can be used at a duty of 100%. Refer to the operation manual for information on how to change the high-output setting. Refer to P. 26 for the payload at each speed/acceleration when the high-output setting is enabled. For other cautionary items, refer to "Explanations of/Cautionary Notes on Items Specified in Catalog (P. 15)."

Actuator Specifications (High-output Setting Enabled)

Selection Guideline (Correlation Diagram of the Push Force and the Current-limiting Value)

In a push-motion operation, the push force can be used by changing the current-limiting value of the controller over a range of 20% to 70%. The maximum push-force varies depending on the model, so check the required push force from the table below and select an appropriate type meeting the purpose of use.

When performing a push-motion operation using a slider actuator, limit the push current so that the reactive force moment generated by the push force will not exceed 80% of the rated moment (M_a , M_b) specified in the catalog.

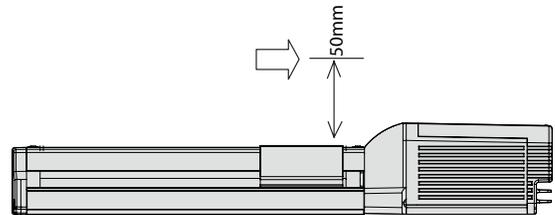

To help with the moment calculations, the application position of the guide moment is shown in the figure below. Calculate the necessary moment by considering the offset of the push force application position.

Note that if an excessive force exceeding the rated moment is applied, the guide may be damaged and the life may become shorter. Accordingly, include a sufficient safety factor when deciding on the push force.

Calculation example)

If a push-motion operation is performed with an ERC3-SA7C by applying 100 N at the position shown to the right, the moment received by the guide, or M_a , is calculated as $(46.5 + 50) \times 100$
 $= 9650 \text{ (N}\cdot\text{mm)}$
 $= 9.65 \text{ (N}\cdot\text{m)}$.

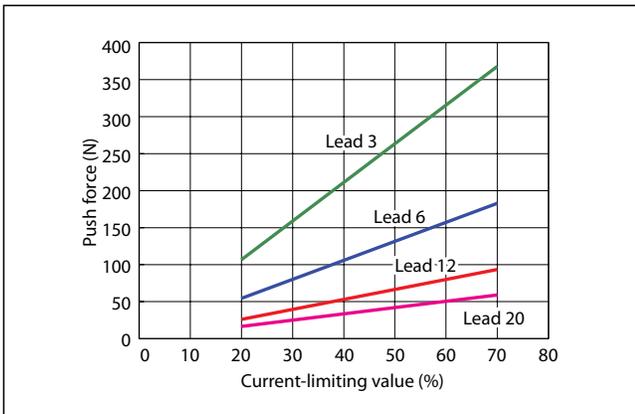

Since the rated moment M_a of the SA7C is 15 (N·m), $15 \times 0.8 = 12 > 9.65$, suggesting that this selection is acceptable. If an M_b moment generates due to the push-motion operation, calculate the moment from the overhang length and confirm, in the same way, that the calculated moment is within 80% of the rated moment.

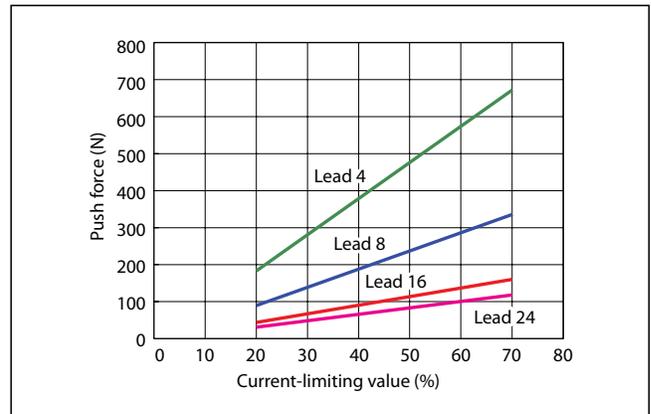

Correlation Diagrams of the Push Force and the Current-limiting Value

The table below is only a reference, and the graphs may vary slightly from the actual values.

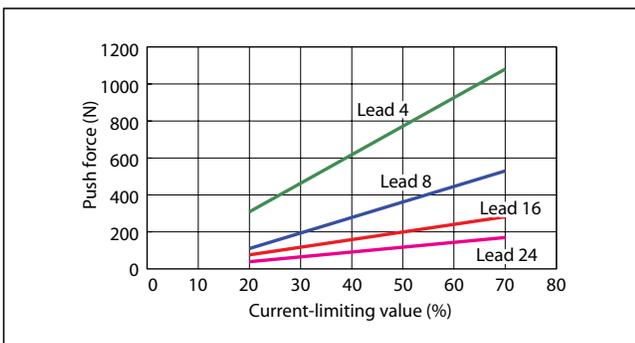

SA5C/RA4C type

SA7C type

RA6C type

Notes on Use

- The relationship of the push force and the current-limiting value is only a reference, and the graphs may vary slightly from the actual values.
- If the current-limiting value is less than 20%, the push force may vary. Make sure the current-limiting value remains 20% or more.
- The graphs assume a traveling speed of 20 mm/s during push-motion operation.

Selection Guideline

(Table of ERC3 Payload by Speed/Acceleration)

High-output setting enabled
(Factory default)

The maximum acceleration/deceleration of the ERC3 is 1.0 G in a horizontal application or 0.5 G in vertical application. The payload drops as the acceleration increases, so when selecting a model, use the tables below to find one that meets the desired speed, acceleration and payload.

■ ERC3-SA5C

Lead 20

List of Base Controller Specifications

Item	Description	
Power supply voltage	24 VDC±10%	
Load current (including current consumed for control)	High-output setting enabled: 3.5 A rated/4.2 A max. High-output setting disabled: 2A	
Heat output	High-output setting enabled: 8 W High-output setting disabled: 5W	
Rush current (Note 1)	8.3A	
Momentary power failure resistance	MAX.500µs	
Motor control method	Field-weakening vector control	
Supported encoder	Incremental encoder of 800 pulses/rev in resolution	
Actuator cable length	10 m max.	
Serial communication interface (SIO port)	RS485: 1 channel (conforming to Modbus protocol RTU/ASCII) / Speed: 9.6 to 230.4 kbps Actuators can be controlled via serial communication in a mode other than pulse-train	
External interface PIO specification	Dedicated 24-VDC signal input/output (NPN or PNP selected)—Up to 6 input points, up to 4 output points Cable length: 10m max.	
Data setting/input method	PC software, touch-panel teaching pendant, quick teach	
Data retention memory	Position data and parameters are saved in the non-volatile memory (There is no limit to the number of times the memory can be written.)	
Operation mode	Positioner mode/Pulse-train control mode	
Number of positions in positioner mode	Standard 8 points, maximum 16 points Note) Positioning points vary depending on the selected PIO pattern.	
Pulse-train interface	Input pulse	Differential method (line driver method): 200 kpps max. / Cable length: 10m max.
		Open collector method: Not supported * If the host is of open collector output type, use the optional AK-04 (sold separately) to convert open collector pulses to differential pulses.
	Command pulse magnification (electronic gear ratio: A/B)	1/50 < A/B < 50/1 Setting range of A and B (set by parameters): 1 to 4096
	Feedback pulse output	None
LED indicators (installed on the motor unit)	Servo ON (green), servo OFF (unlit), emergency stop (red), alarm (red), resetting (orange)	
Isolation resistance	500 VDC, 10 MΩ or more	
Electric shock protection mechanism	Class I basic isolation	
Cooling method	Natural air cooling	
Environment	Ambient operating temperature	0 to 40°C
	Ambient operating humidity	85%RH or less (non-condensing)
	Ambient storage temperature	-20 to 70°C (excluding batteries)
	Operating altitude	Altitude 1000m or less
	Protection degree	IP20
	Cooling method	Natural air cooling
	Vibration resistance	Number of vibrations: 10 to 57 Hz/Amplitude: 0.075 mm (Test conditions) Number of vibrations: 57 to 150 Hz/Acceleration: 9.8 m/s ² Sweep time in X/Y/Z directions: 10 minutes/Number of sweeps: 10 times
	Impact	(Test conditions) 150mm/sec ² , 11mm/sec, sinusoidal half pulse, 3 times each in X, Y and Z directions

Note 1 Rush current will flow for approx. 5msec after the power is turned on (at 40°C).
Take note that the value of rush current varies depending on the impedance of the power line.

Emergency Stop Circuit

The ERC3 series has no built-in emergency stop circuit, so the customer must provide an emergency stop circuit. Refer to the operation manual for details on the emergency stop circuit.

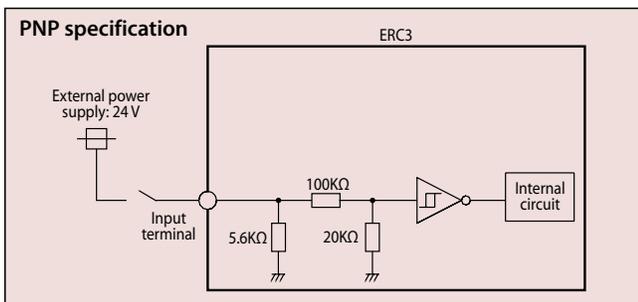

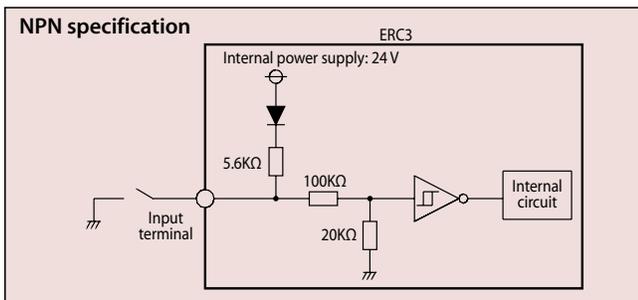

Positioner mode

I/O specification (PIO type)

Input Part

Item	Specification
Input points	6 points
Input voltage	24 VDC ±10%
Input current	5mA/1 circuit
Leak current	1mA/point max.

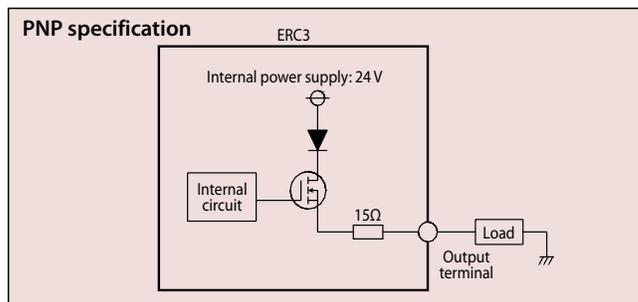

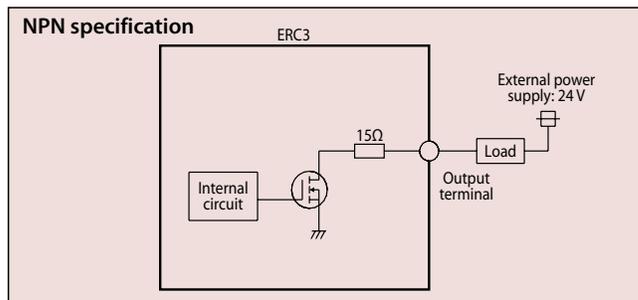

* The input circuit is not isolated from signals input from external equipment.

Output Part

Item	Specification
Output points	4 points
Load voltage	24 VDC ±10%
Maximum load current	5mA/1 circuit
Residual voltage	2 V or less

* The output circuit is not isolated from signals output to external equipment.

I/O Signal Table (PIO Type) [ERC3 and PLC Connected Directly]

(Note) In the table above, codes in () indicate functions effective before the home return. * indicates a negative logic signal. PM1 to PM8 serve as alarm binary code output signals when an alarm occurs.

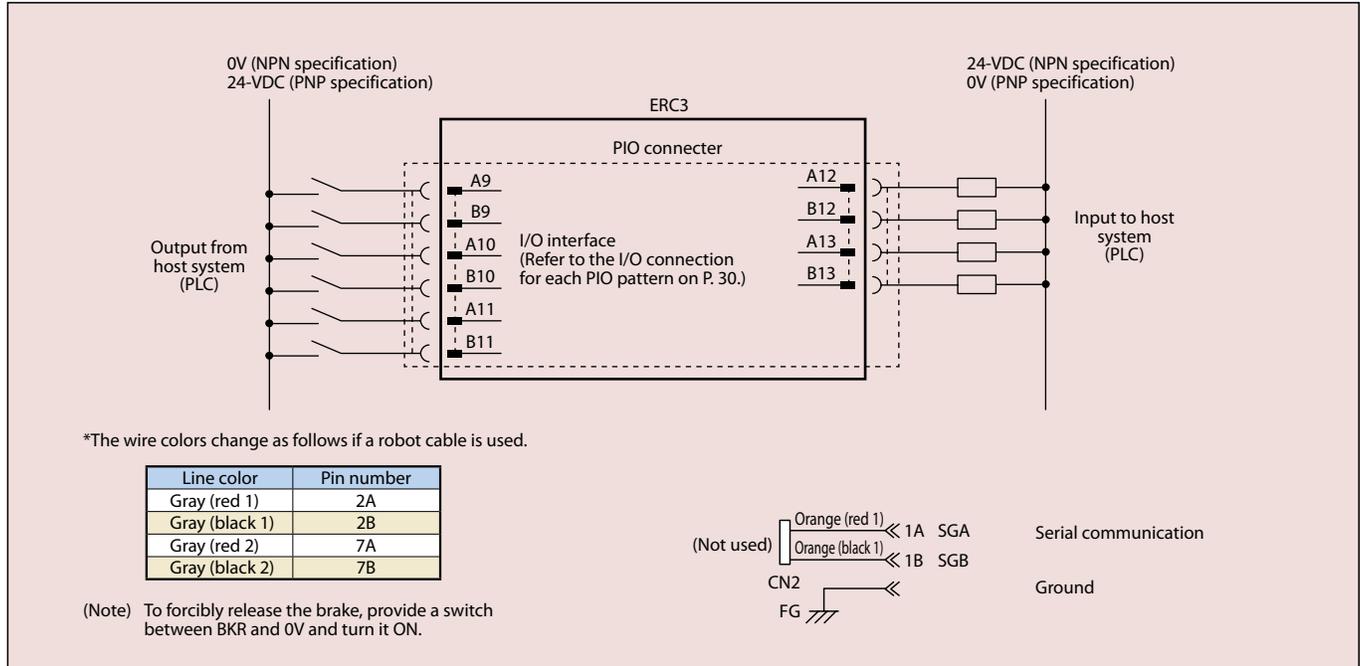

*1 These signals are invalid before the home return.

Explanation of Signal Names

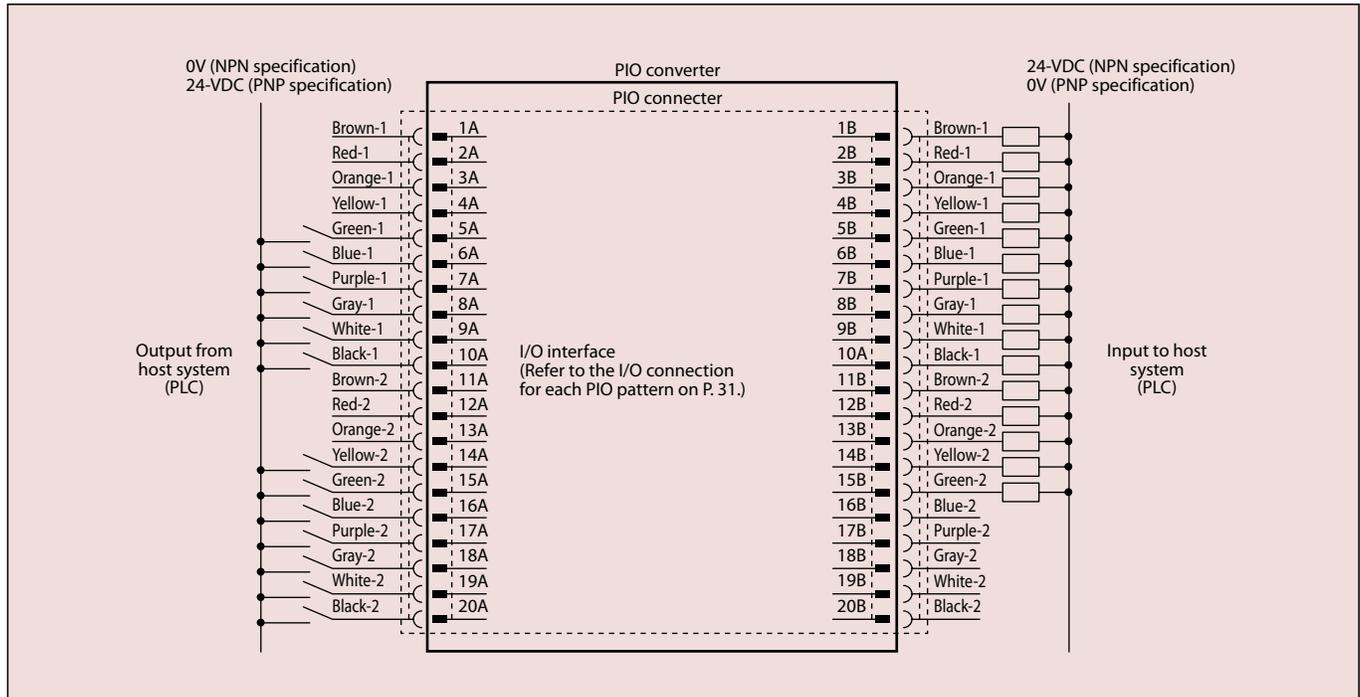

Category	Signal name	Signal abbreviation	Function overview
Input	PTP strobe (start signal)	CSTR	The actuator starts moving to the position set by the command position number.
	Command position number	PC1~PC256	This signal is used to input the position number of the position to move the actuator to (binary input).
	Forced brake release	BKRL	The brake is forcibly released.
	Pause	*STP	When this signal turns OFF while the actuator is moving, the actuator will decelerate to a stop. The remaining travel is put on hold while the actuator is stopped and will resume when the signal turns ON.
	Reset	RES	Present alarms are reset when this signal turns ON. By turning ON this signal while the actuator is paused (*STP signal is OFF), the remaining travel can be cancelled.
	Servo ON	SON	The servo is ON while this signal is ON, and OFF while the signal is OFF.
	Home return	HOME	Home return operation is performed when this signal is turned ON.
	Teaching mode	MODE	The actuator switches to the teaching mode when this signal turns ON. The mode will not change unless the CSTR, JOG+ and JOG- signals are all OFF and the actuator is not operating.
	Jog/inching switching	JISL	The actuator can be jogged with a JOG+ or JOG- command while this signal is OFF. The actuator operates by inching with a JOG+ or JOG- command while this signal is ON.
	Jog	JOG + JOG -	When the JISL signal is OFF, the actuator jogs in the positive direction upon detection of the ON edge of the JOG+ signal, or in the negative direction upon detection of the ON edge of the JOG- signal. The actuator decelerates to a stop if the OFF edge is detected while jogging in each direction. The actuator operates by inching when the JISL signal is ON.
	Current position write	PWRT	When a position number is specified and this signal is turned ON for 20 ms or more in the teaching mode, the current position is written to the specified position number.
	Start signal	ST0~ST6	In the solenoid mode, the actuator moves to the specified position when this signal turns ON.
Out put	ositioning complete	PEND/INP	This signal turns ON when the actuator reaches the positioning band after moving. The PEND signal does not turn OFF even when the actuator moves beyond the positioning band, but the INP signal turns OFF. A parameter is used to switch between PEND and INP.
	Completed position number	PM1~PM256	The position number of the position reached upon completion of positioning is output (by a binary signal).
	Home return complete	HEND	This signal turns ON upon completion of home return. It will remain ON until the home position is lost.
	Zone signal 1	ZONE1	This signal turns ON when the current position of the actuator falls within the parameter-set range.
	Zone signal 2	ZONE2	
	Position zone	PZONE	This signal turns ON when the current position of the actuator enters the range set in the position data table while moving to a position. This signal can be used with ZONE1, but the PZONE signal is effective only when moving to a set position.
	Alarm	*ALM	This signal remains ON while the controller is normal, and turns OFF when an alarm occurs.
	Moving	MOVE	This signal is ON while the actuator is moving (also during home return and push-motion operation).
	Servo ON	SV	This signal is ON when the servo is ON.
	Emergency stop output	*EMGS	This signal is ON when the controller is not in the emergency stop mode, and turns OFF when an emergency stop is actuated.
	Teaching mode output	MODES	This signal turns ON when the actuator enters the teaching mode due to an input of the MODE signal. It turns OFF when the actuator returns to the normal mode.
	Write complete	WEND	This signal is OFF immediately after switching to the teaching mode, and turns ON the moment the writing per the PWRT signal is completed. This signal also turns OFF when the PWRT signal turns OFF.
	Current position number	PE0~PE6	This signal turns ON when the actuator completes moving to the target position in the solenoid mode.
	Limit switch output	LS0~LS2	This signal turns ON when the current position of the actuator enters the positioning band (\pm) around the target position. If the home return has been completed, this signal is output even before a move command is issued or the servo is OFF.
	Load output judgment status	LOAD	This signal turns ON when the in-certification-range command torque exceeds the threshold.
Torque level status signal	TRQS	This signal turns ON when the motor current reaches the threshold.	
Minor failure alarm	*ALML	This signal is output when a message-level alarm generates.	

(Note) In the table above, * indicates a negative logic signal.

PIO 8-point Type (ERC3 and PLC Connected Directly)

PIO Positioning Mode (Standard Type) (ERC3 and PLC Connected via PIO Converter)

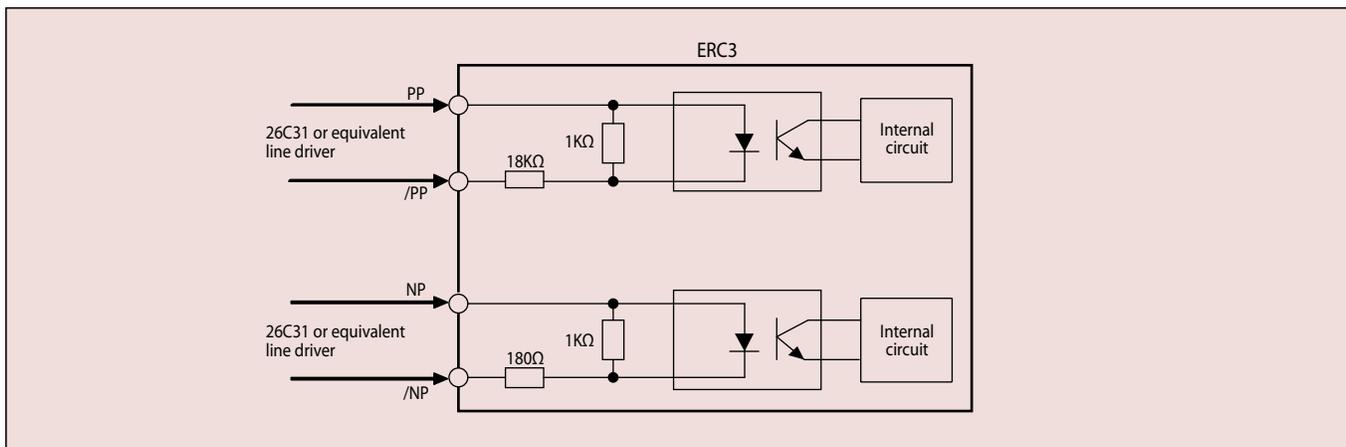

Pulse-train control mode

I/O specification (Pulse-train type)

Input Part

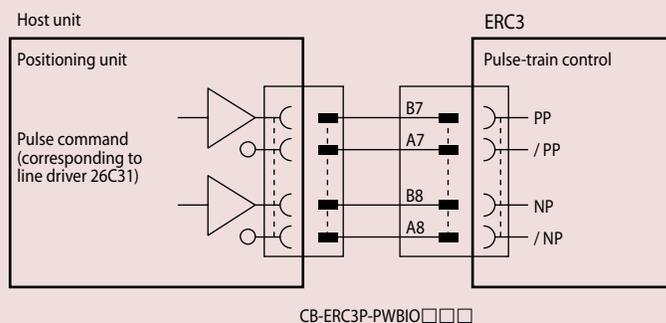

Code	Remarks
Differential input voltage range	26C31 or equivalent
Maximum cable length	Differential line driver method: 10m max. Open collector method (AK-04 used): 2m max.
Maximum number of input pulses	Differential line driver method: 200 kpps max. Open collector method (AK-04 used): 60kpps max.

* If the user-side I/O is of open collector type, use the AK-04.

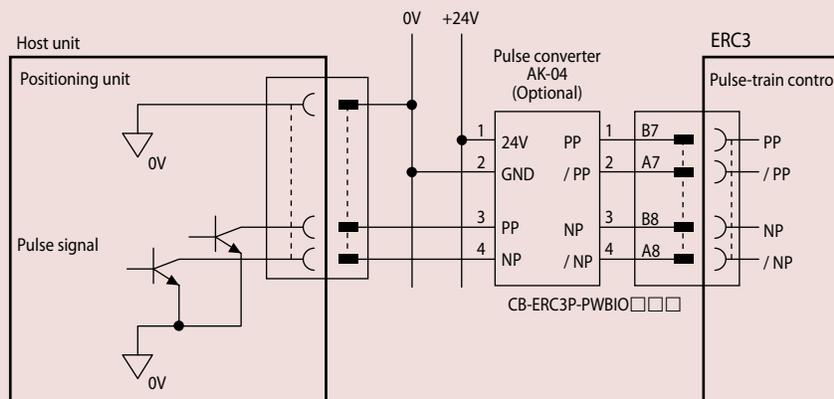

Pulse-train Control Circuit

● Host Unit = Differential Type

● Host Unit = Open Collector Type

* The AK-04 (optional) is needed to input pulses.

* Use the same power supply for open collector input/output to/from the host and for the AK-04.

I/O Signals for the Pulse-train Control Mode

The table below lists the signal assignments for the flat cable for the pulse-train control mode. Connect an external device (such as PLC) according to this table.

[1] Positioning Operation - PIO Pattern: 0

Pin number	Category	I/O number	Signal abbreviation	Signal name	Description of function
A1	Frame ground		FG	—	Frame ground.
B1	+24 V for control power supply		CP	—	+24 V of the control power supply is input.
A2				—	
B2	0 V for control power supply		GND	—	0 V of the control power supply.
A3	External brake release input		BK	—	This signal is used to release the brake externally. The brake is released when +24 V is input.
B3	+24 V for motor power supply		MP	—	+24 V of the motor power supply is input.
A4	Emergency stop input		EMG	—	Input signal for emergency stop.
B4	0 V for motor power supply		GND	—	+24 V of the motor power supply is input.
A5					
B5					
A6					
B6					
A7			/PP	Command pulse	
B7			PP	Command pulse	
A8			/NP	Command pulse	
B8			NP	Command pulse	
A9	Input	IN0	SON	Servo ON	The servo is ON while this signal is ON, and OFF while the signal is OFF.
B9		IN1	TL	Torque limit selection	When this signal is turned ON, the motor torque is limited to the value set by a parameter.
A10		IN2	HOME	Home return	Home return operation is performed when this signal is turned ON.
B10		IN3	RES	Reset	Present alarms are reset when this signal is turned ON.
A11		IN4	—		
B11	IN5	—			
A12	Output	OUT0	SV	Servo ON status	This signal turns ON when the servo is ON.
B12		OUT1	INP	Positioning complete	This signal turns ON when the amount of remaining travel pulses in the deviation counter falls within the positioning band.
A13		OUT2	HEND	Home return complete	This signal turns ON upon completion of home return.
B13		OUT3	*ALM	Controller alarm status	This signal turns ON when the controller is normal, and turns OFF when an alarm generates.

* indicates a negative logic signal. Negative logic signals are normally ON while the power is supplied, and turn OFF when the signal is output.

[2] Push-motion Operation - PIO Pattern: 1

Pin number	Category	I/O number	Signal abbreviation	Signal name	Description of function
A1	Frame ground		FG	—	Frame ground.
B1	+24 V for control power supply		CP	—	+24 V of the control power supply is input.
A2				—	
B2	0 V for control power supply		GND	—	0 V of the control power supply.
A3	External brake release input		BK	—	This signal is used to release the brake externally. The brake is released when +24 V is input.
B3	+24 V for motor power supply		MP	—	+24 V of the motor power supply is input.
A4	Emergency stop input		EMG	—	Input signal for emergency stop.
B4	0 V for motor power supply		GND	—	+24 V of the motor power supply is input.
A5					
B5					
A6					
B6					
A7			/PP	Command pulse	
B7			PP	Command pulse	
A8			/NP	Command pulse	
B8			NP	Command pulse	
A9	Input	IN0	SON	Servo ON	The servo is ON while this signal is ON, and OFF while the signal is OFF.
B9		IN1	TL	Torque limit selection	When this signal is turned ON, the motor torque is limited to the value set by a parameter.
A10		IN2	HOME	Home return	Home return operation is performed when this signal is turned ON.
B10		IN3	RES	Reset	This signal serves as a reset signal when the torque is not limited (torque TL signal is OFF). When this signal turns ON, present alarms are reset.
A11		DCLR	Deviation counter clear	This signal serves as a deviation counter signal when the torque is limited (torque TL signal is ON). This signal clears the deviation counter.	
B11	IN4	—			
A12	Output	OUT0	SV	Servo ON status	This signal turns ON when the servo is ON.
B12		OUT1	INP	Positioning complete	This signal serves as a positioning complete signal when the torque is not limited (torque TL signal is OFF). It turns ON when the remaining travel pulses in the deviation counter are within the range of positioning band.
A13		TLR	Torque limited	This signal serves as a torque limited signal when the torque is limited (torque TL signal is ON). If the torque is limited, this signal turns ON when the torque limit is reached.	
B13		OUT2	HEND	Home return complete	This signal turns ON upon completion of home return.
		OUT3	*ALM	Controller alarm status	This signal turns ON when the controller is normal, and turns OFF when an alarm generates.

* indicates a negative logic signal. Negative logic signals are normally ON while the power is supplied, and turn OFF when the signal is output.

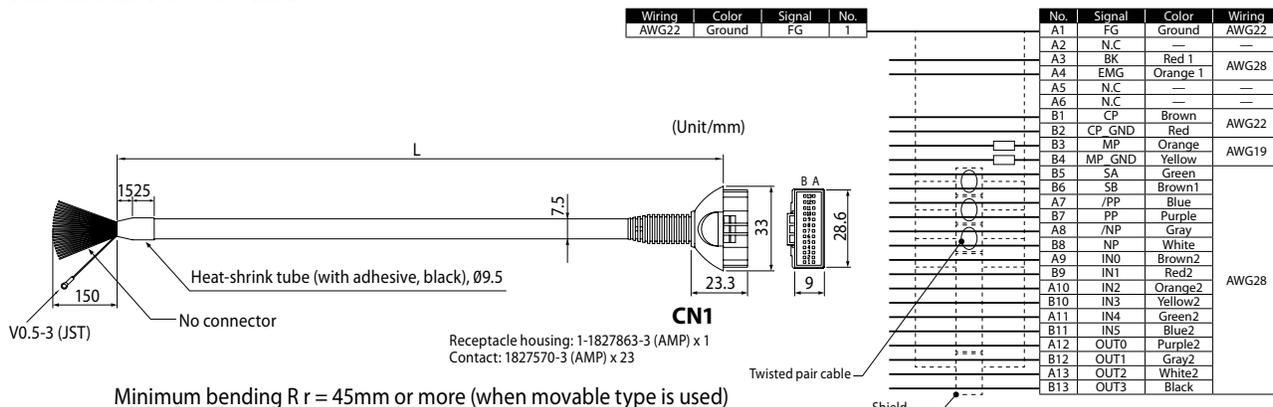

Cable/Maintenance Parts

Power & I/O Cable for PIO Type

Model number **CB-ERC3P-PWBIO** □□□

*□□□ indicates the cable length (L). A desired length can be specified up to 10m. Example: 080=8m

* The standard cable is a robot cable.

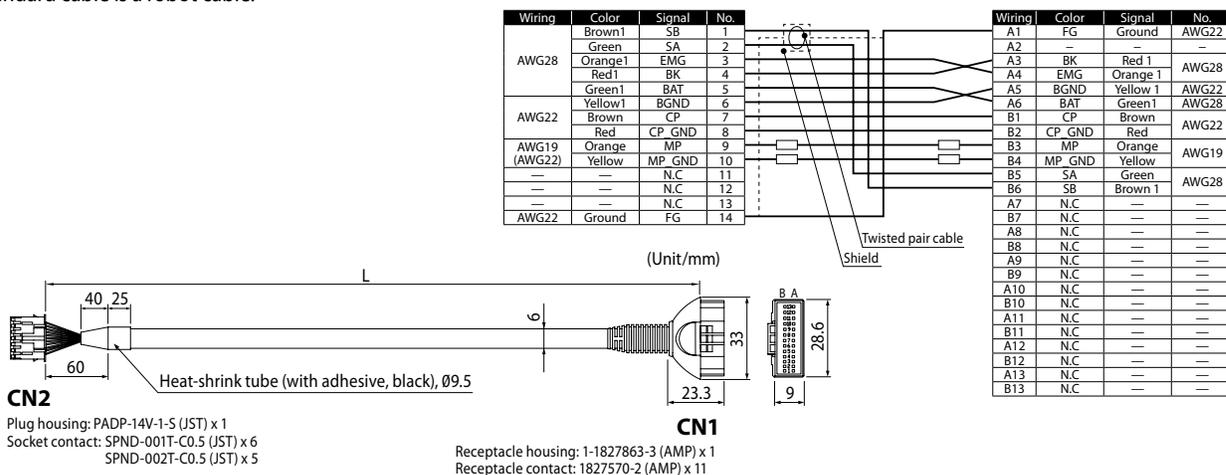

Minimum bending R r = 45mm or more (when movable type is used)

Power & I/O Cable for SIO Type

Model number **CB-ERC3S-PWBIO** □□□

*□□□ indicates the cable length (L). A desired length can be specified up to 10m. Example: 080=8m

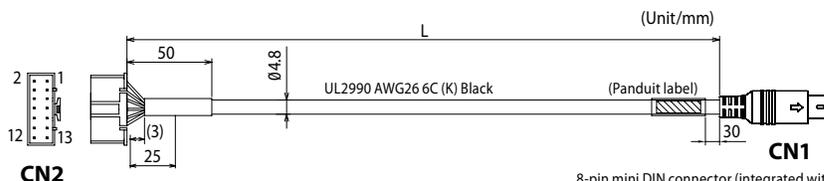

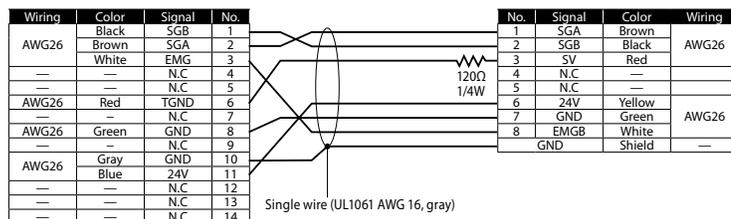

* The standard cable is a robot cable.

Minimum bending R r = 36 mm or more (when movable type is used)

SIO Communication Cable (for Quick Teach)

Model number **CB-PST-SIO050**

8-pin mini DIN connector (integrated with molding)
 Contact: MD-SP2240 (JST) x 8
 Metal shell: MD-PS8T (JST)
 Housing A: MD-PI8A (JST)
 Housing B: MD-PI8B (JST)
 Cover: MD-PCC8T-S2 (JST)
 * The 8-pin mini DIN connector may be an equivalent product.

Options

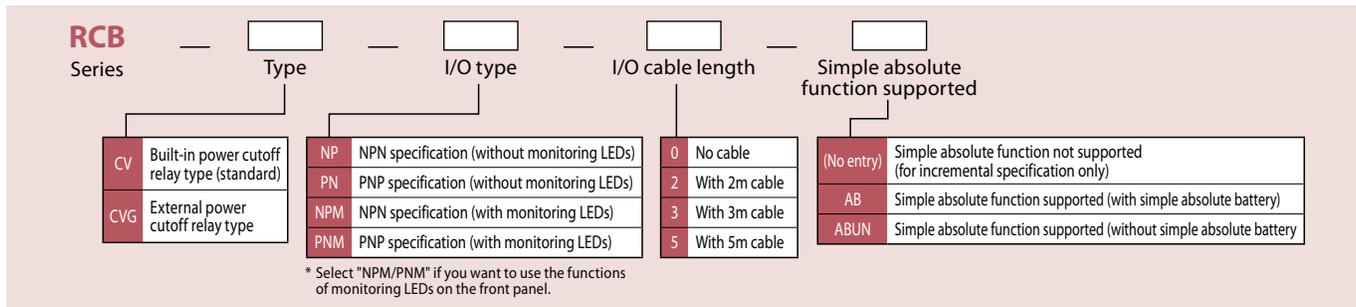

PIO Converter

The PIO converter is a wiring/power supply unit used exclusively with the ERC3 series. By connecting the PIO converter to the ERC3 series, functions of the ERC3 series can be extended.

- **Features**
 - The compact size (25W x 90H x 98D) saves space.
 - Can be installed on a DIN rail or removed with a single action.
 - Comes with a PIO interface offering 16 input points/16 output points. NPN and PNP specifications are available.
 - Brake release switch on the front panel.
 - Comes with SIO terminals. Teaching of ERC3-series actuators is possible from the teaching pendant or PC software.
 - LEDs on the front panel indicate the command current ratio, alarm code and PIO status (optional).
 - When combined with an ERC3 actuator of absolute specification, the simple absolute function is supported (optional).
 - Comes with a calendar function. (Connecting the PIO converter enables the calendar function of the ERC3.)

Model Configuration

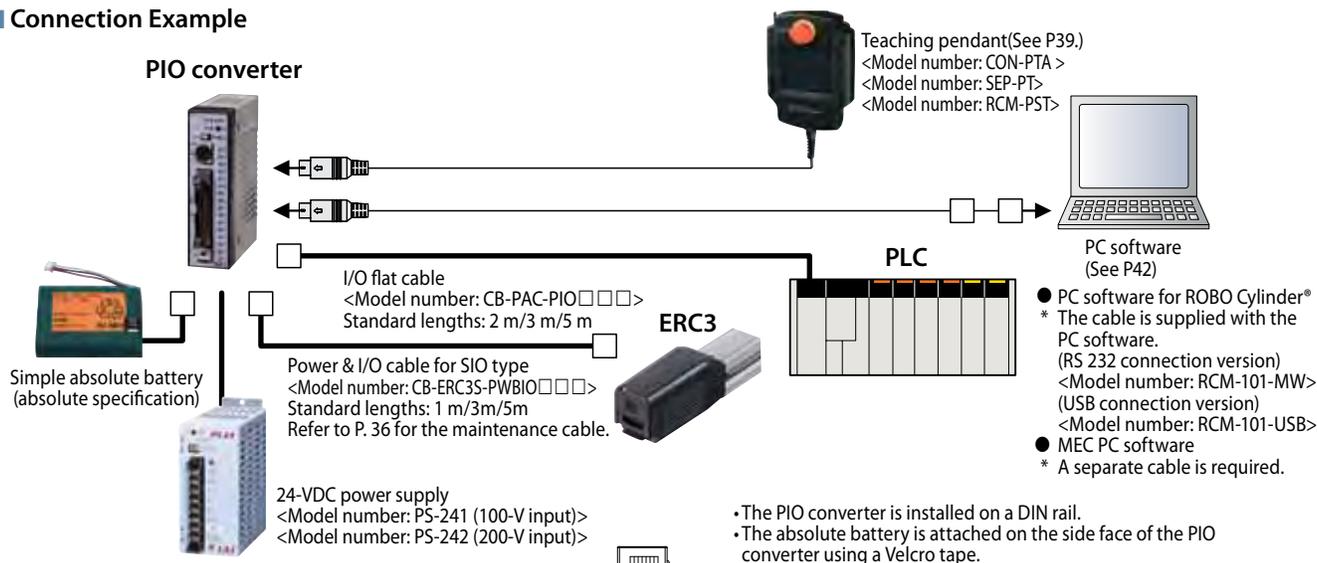

Base Specifications

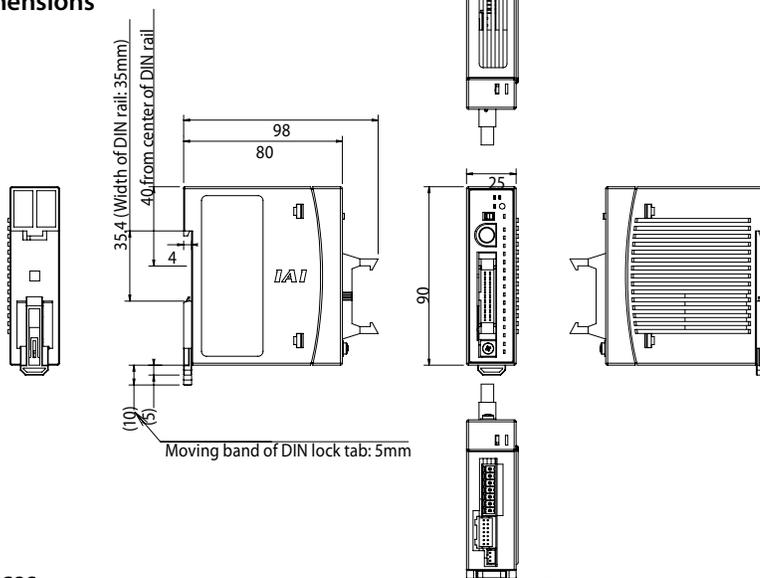

Item	Description	
Number of connected axes	ERC3 1 axis	
Power supply voltage	24VDC±10%	
Control power capacity	0.8A max.	
Heat output	1.3W	
Momentary power failure resistance	500µs max.	
Serial communication interface (SIO port)	RS485: 1 channel (conforming to Modbus protocol RTU/ASCII) / Speed: 9.6 to 230.4 kbps Actuators can be controlled via serial communication.	
External interface	Dedicated 24-VDC signal input/output (NPN or PNP selected)—Up to 16 input points, up to 16 output points / Cable length: 10 m max.	
Data setting/input method	PC software, touch-panel teaching pendant	
Operation Mode	Positioner mode	
Number of positions in positioner mode	Standard 64 points, maximum 512 points Note) Positioning points vary depending on the selected PIO pattern.	
LED display (installed on the front panel)	Status indicator LED - Steady green light: Servo ON / Blinking green light: Auto servo OFF / Steady red light: Alarm present Absolute battery status indicator LED - Green: Fully charged / Orange: Charging / Red: Not connected Absolute reset status LED - Green: Absolute reset complete / Red: Absolute reset not yet complete LED0 to LED15 (optional): 4 different statuses can be indicated by changing the switch setting. Command current ratio, alarm code, PIO input status, PIO output status	
Electromagnetic brake forced release switch (installed on the front panel)	Switched between NOM (standard) and BK RLS (forced releases)	
Isolation resistance	500VDC, 10MQ or more	
Electric shock protection mechanism	Class I basic isolation	
Cooling method	Natural air cooling	
Environment	Ambient operating temperature	0 to 40°
	Ambient operating humidity	85%RH or less (non-condensing)
	Ambient storage temperature	-20 to 70° (excluding batteries)
	Operating altitude	Altitude 1000m or less
	Protection degree	IP20
	Vibration resistance	Number of vibrations: 10 to 57 Hz / Amplitude: 0.075 mm Number of vibrations: 57 to 150 Hz / Acceleration: 9.8 m/s ² Sweep time in X/Y/Z directions: 10 minutes / Number of sweeps: 10 times
	Weight	103g or less, or 287g (including 190g for the battery) or less for the simple absolute specification
External Dimensions	25W×90H×98D	
Consumable parts	RTC backup capacitor: Approx. 5 years* Drive-source cutoff relay: Approx. 100,000 actuations Absolute battery: Approx. 3 years	

*When the power is supplied 12 hours a day at an ambient temperature of 40°C and the actuator is stopped (power turned off) 12 hours a day in an ambient temperature of 20°C.

Notes on Selecting Teaching Pendant and PC Software

With the ERC3 series, usable teaching pendant and PC software vary depending on the controller type (CON type/MEC type). Refer to P.14 for controller types.

Teaching pendant

Controller type	CON-PTA	RCM-PST	SEP-PT
CON type	○	△	—
MEC type	○	○	○

PC software

Controller type	RCM-101-MW	RCM-101-USB	MEC PC software
CON type	○	○	—
MEC type	—	—	○

○: All functions are supported / △: Limited functions are supported (home return, servo ON/OFF, JOG+, JOG-, stop (press and hold to reset alarms))

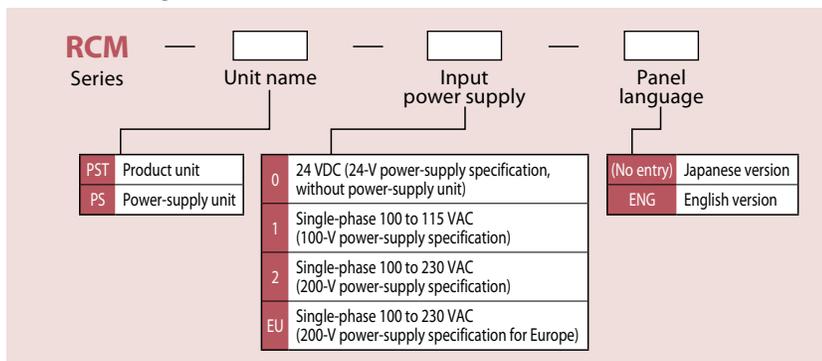

Options

Quick Teach

A teaching pendant equipped with intuitive operation buttons and acceleration/speed knobs that can be used easily even by mechanical engineers and those who never operated a robot before.

- **Features**
 - User-friendly panel sheet switches and knobs let you complete the settings in no time.
 - The small pendant can be held in a hand.
 - Separate power-supply unit

Standard price	—	—	—	

Note 1) If an ERC3 actuator whose high-output setting is enabled is used to perform test run using the Quick Teach connected to the above power-supply unit, the ERC3 may not operate as specified. (Position data can be edited without problems.)

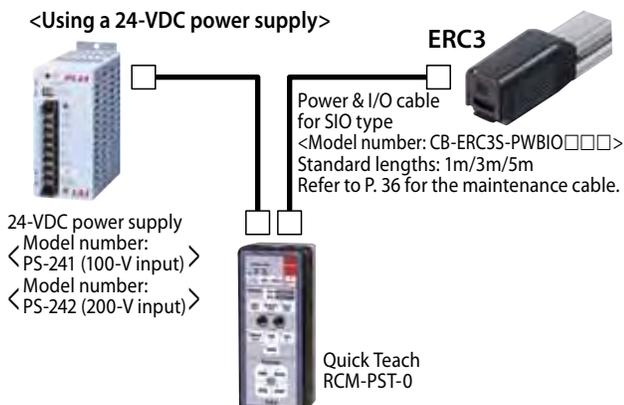

If test run is performed with the actuator's high-output setting enabled, connect a 24-VDC power supply to the Quick Teach. In this case, disconnect the power-supply unit.

Note 2) The CE Mark-compliant 200-V power-supply specification for Europe will be released soon.

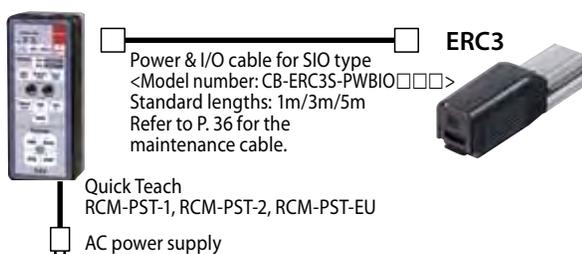

Connection Example

Supplying power from the Quick Teach to the ERC3

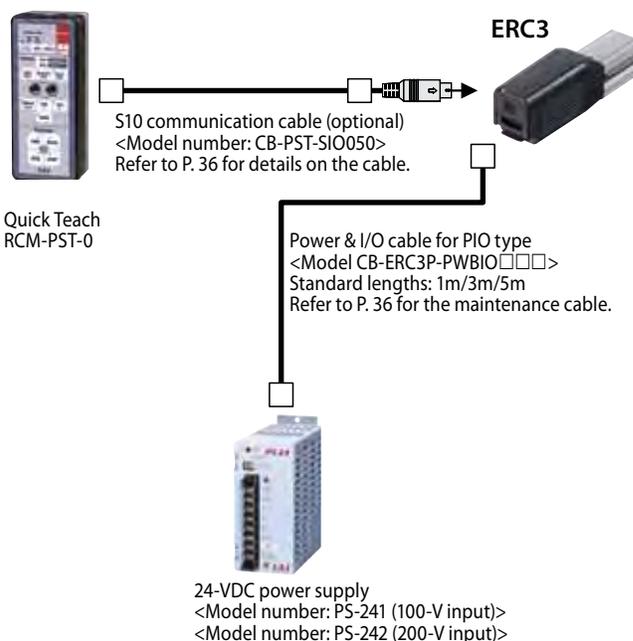

<Using a 24-VDC power supply>

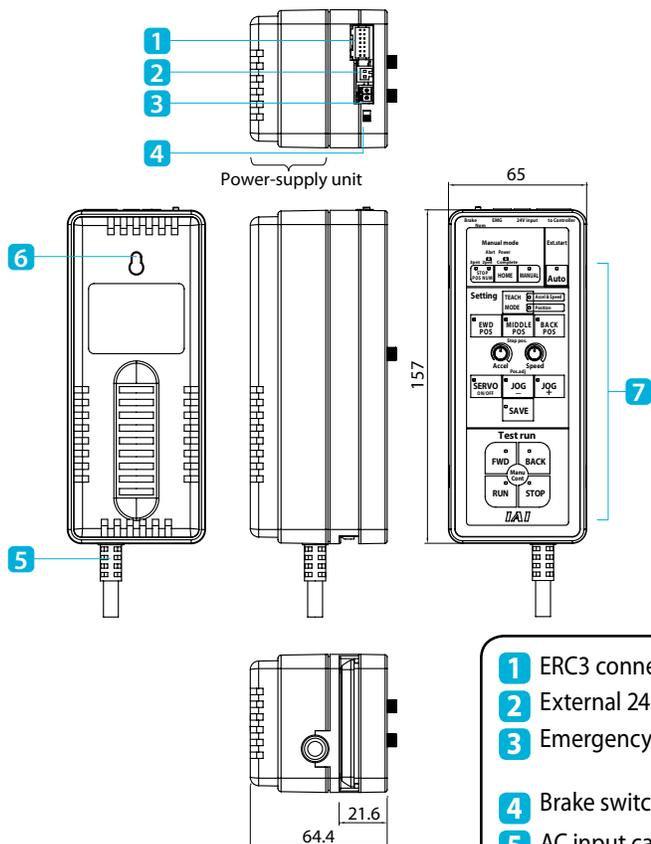

<Using a 100/200-VAC power supply>

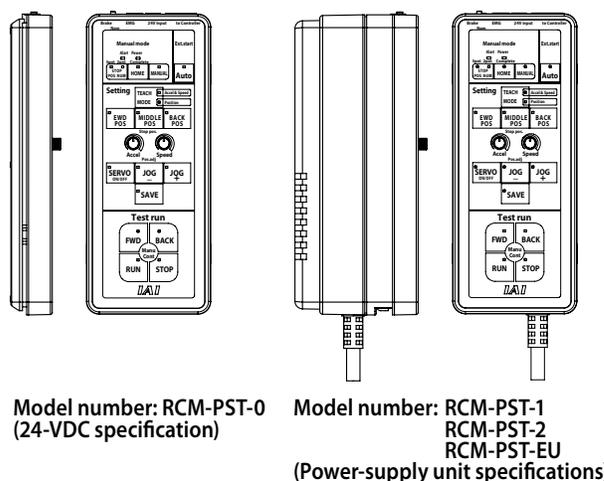

Connecting the Quick Teach to the ERC3 supplied with power

Name and Function of Each Part/External Dimensions

<Quick Teach and Model Numbers>

Shown above are the external dimensions of the Quick Teach with power-supply unit (model number: RCM-PST-1/2/EU).

The 24-V power-supply specification (model number: RCM-PST-0) has no power-supply unit.

- 1 ERC3 connector..... For cable connection with the ERC3.
- 2 External 24-V connector 24 VDC±10%. * Supplied with a plug connector.
- 3 Emergency stop connector Connect an emergency stop switch.
* Supplied with a plug connector.
- 4 Brake switch Forced release switch for an actuator with brake.
- 5 AC input cable Single-phase 100 or 230-V input.
* Varies depending on the product.
- 6 Wall-mounting hook..... The hook can be secured with M3 or equivalent screws or bolts (screw head size: Ø6 or less).
- 7 Operation switches..... Panel sheet switches

Options

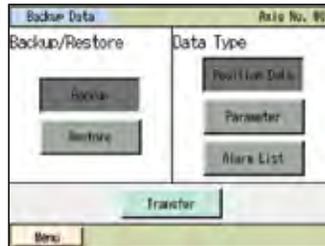

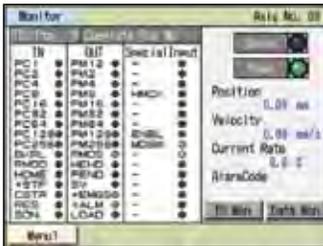

Touch-panel Teaching Pendant for Position Controller

Developed based on the design of the popular CON-PT series adopting an easy-to-use interactive touch-panel menu screen, this new data input device supports various functions offered by the PCON-CA controller.

CON-PTA

1. Color screen for greater ease of view
2. Supporting the takt time minimization function and maintenance information checking/ input functions of the PCON-CA
3. Position, parameters and other data can be saved in a SD card
4. Built-in clock function records the date & time of each event; data can then be saved in a SD card.

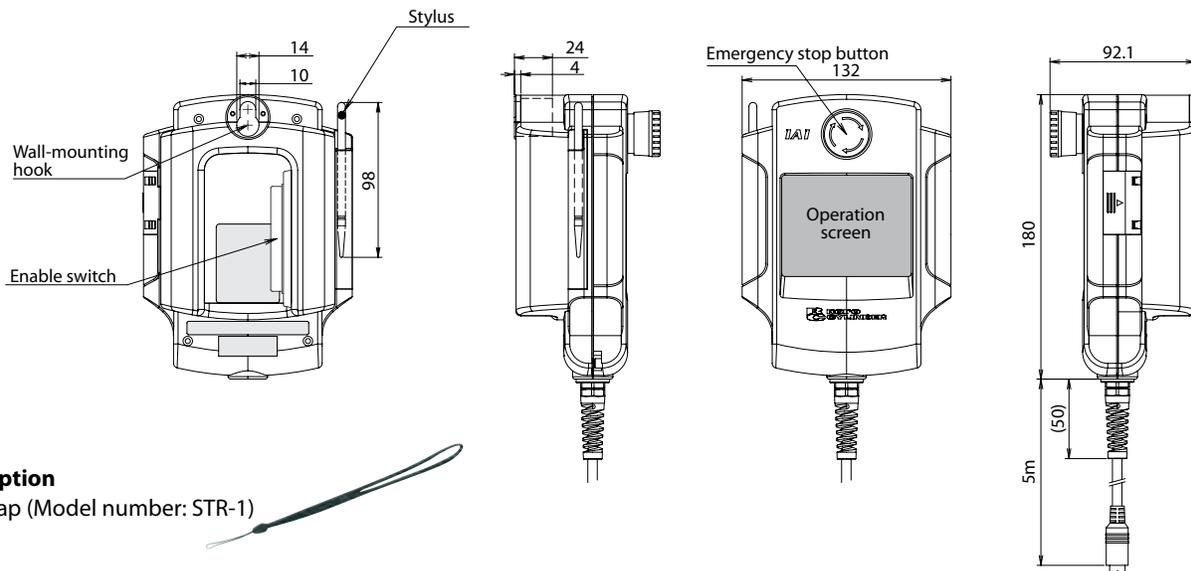

Model Numbers/Specifications

Item	Description		
Model number	CON-PTA-C-ENG	CON-PDA-C-ENG	CON-PGA-C-S-ENG
Type	Standard type	Enable switch type	Safety-category compliant type
Connectable controllers	ACON/PCON/SCON/RACON/RPCON ASEP/PSEP AMEC/PMEC ERC2 (*1)/ERC3		
3-position enable switch	×	○	○
Functions	<ul style="list-style-type: none"> • Position data input/editing • Moving function (moving to set positions, jogging/inching) • Parameter editing • Monitoring (current position, current speed, I/O signals, alarm code, alarm generation time) • Saving/reading data to/from external SD cards (position data parameters, alarm list) • Takt time minimization function • Maintenance information (total number of movements, total distance travelled, etc.) 		
Display	65536 colors (16-bit colors), white LED backlight		
Ambient operating temperature/humidity	0 to 50°C, 20 to 80% RH (non-condensing)		
Environmental resistance	IP40 or equivalent		
Mass	Approx. 570g		Approx. 600g
Cable length		5m	
Accessories	Stylus	Stylus	Stylus, TP adapter (Model number: RCB-LB-TG) Dummy plug (Model number: DP-4) Controller cable (Model number: CB-CON-LB005)

*1 Among the ERC2 series, only the actuators bearing 4904 or greater number stamped on the serial number label can be connected.

Name of Each Part

■ Name of Each Part/External Dimensions

■ Option

- Strap (Model number: STR-1)

Options

Touch-panel Teaching Pendant for Position Controller SEP-PT

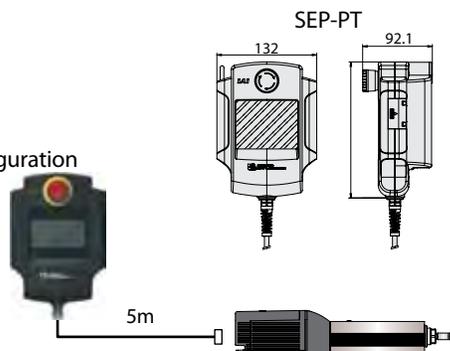

- **Features** Teaching device offering position input, test run, monitoring and other functions.
*This teaching pendant can be used when the ERC3's controller type is set to "MEC type."

SEP-PT version 3.00 or later is supported.

■ **Specifications**

Item	SEP-PT
Data input	○
Actuator operation	○
Ambient operating temperature/humidity	Temperature 0 to 40°C, humidity 85%RH or less
Operating ambience	Free from corrosive gases or significant powder dust.
Protection degree	IP40
Mass	Approx. 550g
Cable length	5m
Display	3-color LED touch panel with backlight
Standard price	—

■ **Configuration**

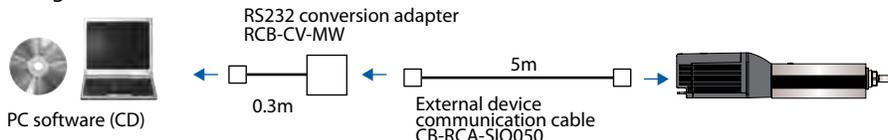

■ PC Software (Windows Only)

- **Features** This startup support software provides functions to input positions, perform test runs and monitor data, among others. Incorporating all functions needed to make adjustments, this software helps shorten the initial startup time.
*This teaching pendant can be used when the ERC3's controller type is set to "CON type."

SEP-PT version 8.03.00.00 or later is supported.

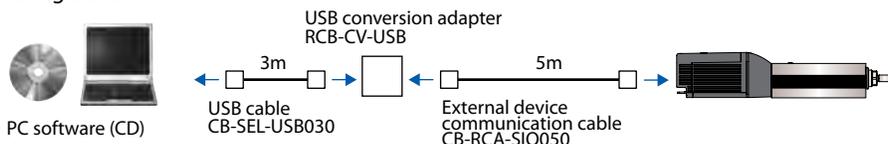

- **Model number** **RCM-101-MW**
(With external device communication cable + RS232 conversion unit)

■ **Configuration**

- **Model number** **RCM-101-USB**
(With external equipment communication cable + USB conversion adapter + USB cable)

■ **Configuration**

■ MEC PC Software

You can change the stop position data, perform test run and do many other things on a PC using the MEC PC software. This software also lets you use the middle stop function, perform push-motion operation, change the coordinates, etc., with ease. The MEC PC software can be downloaded on the IAI's website.

The MEC PC software can be used with the version 2.00.00.00 or later.

IAI's website: www.intelligentactuator.com

*This teaching pendant can be used when the ERC3's controller type is set to "MEC type."

The cable supplied with the above "PC software (RCM-101-MW/RCM-101-USB)" can be used to connect the PC and ERC3 series. To purchase a cable separately, select an appropriate cable/adaptor by referring to the table below.

PC connection method	Model	Name	Price
RS232	CB-RCA-SIO050	External device communication cable	—
	RCB-CV-MW	RS232 conversion adapter	—
USB	CB-RCA-SIO050	External device communication cable	—
	RCB-CV-USB	USB conversion adapter	—
	CB-SEL-USB030	USB cable	—
