#### 22 WIRELESS TECHNOLOGY 868 MHZ / 915 MHZ

- 24 Wireless receivers / Wireless repeaters SWAVE®
- 24 Wireless receiver RF Rx SW868/SW915-1W
- 25 Wireless receiver RF Rx SW868/SW915-2W-RS232
- 26 Wireless receiver RF Rx SW868/SW915-4S
- 27 Wireless receiver RF Rx SW868/SW915-TCP/IP
- 28 Wireless receiver / Wireless repeater RF RxT SW868/SW915-USB
- 30 Wireless repeater RF RxT SW868/SW915-1K
- 31 Wireless repeater RF RxT SW868/SW915-2K

- 32 Wireless receivers / Wireless repeaters ENOCEAN®
- 32 Wireless receiver RF Rx EN868-1W
- 33 Wireless receiver RF Rx EN868-2W-RS232
- 34 Wireless receiver / Wireless repeater RF RxT EN868-USB
- 35 Wireless receiver RF Rx EN868-4W
- 36 Wireless receiver RF Rx EN868 TCP/IP
- 37 Wireless repeater RF RxT EN868-230VAC

- 38 Wireless position switches
- 38 Series RF 10 EN868
- 39 Series RF 10 SW868/SW915
- 40 Series RF 13 SW868/SW915
- 48 Series RF 95 EN868
- 49 Series RF 95 SW868/SW915
- 56 Series RF 96 EN868
- 57 Series RF 96 SW868/SW915
- 64 Series RF 41 EN868
- 74 Series RF 98 EN868
- 75 Series RF 98 SW868/SW915

- 80 Wireless command devices
- 80 Series RF BF 72 EN868
- 84 Series RF BF 74 SW868/SW915
- 88 Series RF 95 EN868
- 89 Series RF 95 SW868/SW915

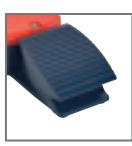

- 92 Wireless hand controls
- 92 Series RF HB SW868/SW915

94 Wireless multifunction handles

94 Series RF TGM SW868/SW915

96 Wireless foot switches

96 Series RF GFI EN868

97 Series RF GFI SW868/SW915

98 Series RF GFSI EN868

99 Series RF GFSI SW868/SW915

100 Wireless pull-wire switches

100 Series RF 95 WH/90° EN868

101 Series RF 95 WH/90° SW868/SW915

102 Series RF 41 Z EN868

104 Wireless magnetic sensors

104 Series RF RC 10 EN868

105 Series RF RC 10 SW868/SW915

106 Series RF RC M30 SW868/SW915-KST

107 Series RF RC M30 SW868/SW915-Niro

108 Wireless inductive sensors

109 Series RF IS M8

109 Series RF IS M12

109 Series RF IS M18

110 Series RF IS M30

112 Wireless optical sensors

112 Series RF 96 LT EN868

114 Wireless universal transmitters

114 Series RF 96 ST EN868

115 Series RF 96 ST SW868/SW915

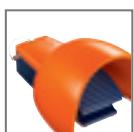

116 Series RF 96 ST SW868/SW915-Vcc extern

118 Series RF I/O SW868/SW915

119 Series RF I/O SW868/SW915-Vcc extern

120 Accessories

129 WIRELESS TECHNOLOGY SWAVE®-SAFE

- 130 Safe wireless system sWave®-safe
- 132 Series RF GFI SW2.4-safe
- 133 Series RF GFSI SW2.4-safe
- 134 Series RF GF SW2.4-safe
- 135 Series RF GFS SW2.4-safe
- 136 Series RF GF 2 SW2.4-safe

# // SAFE SWITCHGEAR FOR DEMANDING AND CRITICAL APPLICATIONS

»Safe switchgear for demanding and critical applications«. True to this motto, steute has been providing its customers with innovative, practical and durable switchgear solutions – for over 50 years.

When our customers are successful, so are we. Because we always focus on our customers, our company has grown steadily and sustainably over the last decades. Steute is committed to continuing this growth – in close cooperation with our customers.

We are situated in East Westphalia, a key region for machine building and electrical goods manufacturing. It is home to qualified specialists committed to developing and manufacturing innovative products. It is also the location of renowned universities, research and educational institutions to which we maintain healthy contacts.

Markets are no longer restricted by national borders. This is why our products are developed and tested for extreme conditions all over the world. We take care to ensure that our products are always certified according to the latest international standards. In every industrial or emerging nation in the world, steute has access to qualified specialists who can guarantee competent support and a quick service.

As a medium-sized company we are able to react with speed to customer wishes and market trends. We are continually developing innovative products and using new technologies as we consistently open up new fields of application for our switchgear.

steute is currently active in four different business fields, producing switchgear, sensors and control units for use in industry and in medical equipment:

## Wireless

Cable free switchgear and sensors for use in machinery and process plants. These industrial-strength wireless switches communicate with higher level control systems via reliable wireless transmission. »Energy harvesting« can play a major role in these products.

## Automation

Standard and customised switchgear for machinery and process plants. Tried and tested electromechanical and non-contact technologies for classical applications in industrial automation and process control – always with a view to the latest global requirements.

## Extreme

Switchgear and sensors for use in extreme environments or under extreme conditions. Certified products for use in hazardous areas worldwide (e. g. ATEX, IECEx, EAC).

## Meditec

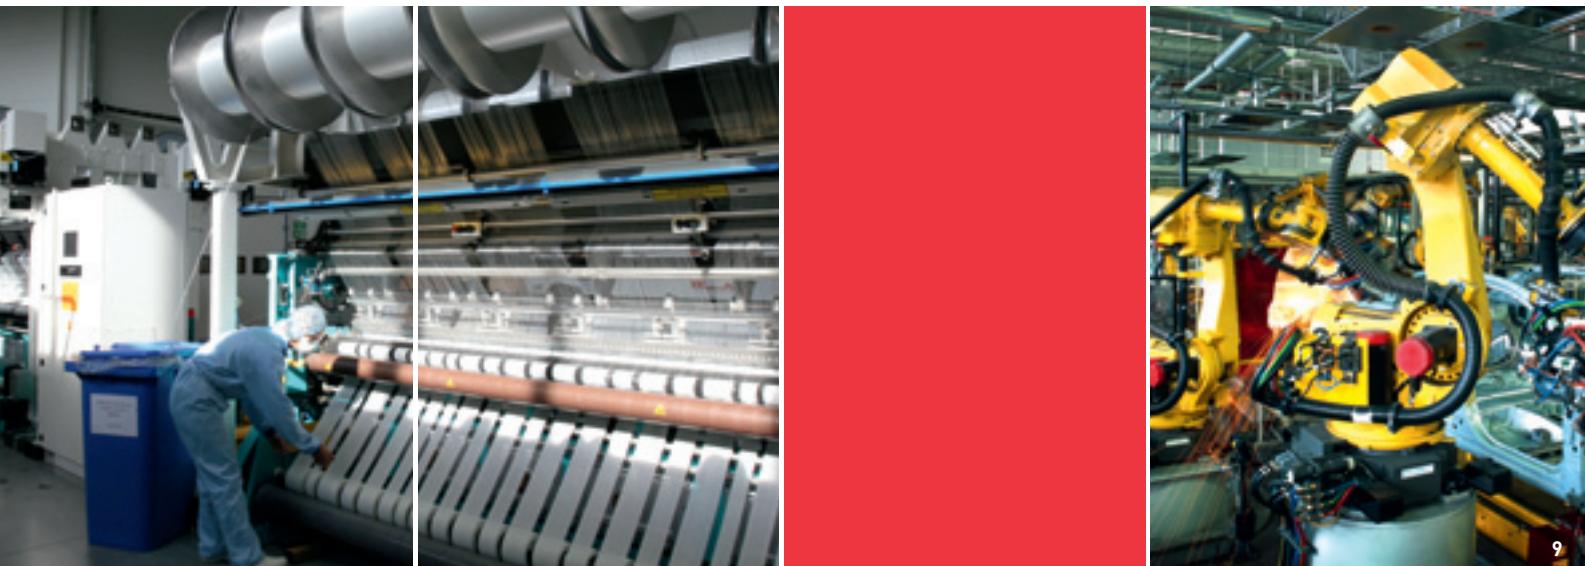

A comprehensive range of standard and customised foot and hand controls for medical devices, meeting the highest ergonomic and availability requirements. Produced in accordance with the certified EN ISO 13485 quality management system for medical products.

The following information provides an overview of our standard range of switchgear for complex and demanding applications. We will be happy to provide you with any additional information you require. If you cannot find the solution for your application: just get in touch. We have already helped numerous customers by developing »tailor-made« switchgear for their individual needs.

**Marc Stanesby**  
Managing Director  
steute Schaltgeräte GmbH & Co. KG

// STEUTE WIRELESS – RELIABLE, MANAGEABLE AND PRACTICE  
ORIENTATED WIRELESS TECHNOLOGY – WORLDWIDE APPLICABLE

#### A new business field is introduced

By restructuring its business fields, steute is taking into account the increasingly important share of its product range held by "wireless automation" – and the fact that the enterprise is now in a position to provide a large selection of different wireless technologies for industrial automation and the building services industry. The products included in this new "Wireless" business field are all presented in this brochure.

#### Industry makes high demands on wireless devices

Compared to consumer applications, industry and building automation make higher demands on wireless technologies. Wireless interference from other wireless systems affects the wireless links, as do emissions, e.g. from machine enclosures. steute began to tackle this problem early on – first in its business field Medical Technology, where particularly high demands are made on transmission safety. Soon afterwards wireless switchgear began to be developed for industrial automation.

#### A comprehensive range with different wireless standards

The rapidly growing demand has led to continual expansion of our range. At the beginning, we used available wireless standards. However, they limited the application of wireless technology in several fields. That is why, in a first step, the steute developers adapted these standards to suit the requirements of its customers. In a second step, steute then developed its own wireless standards, which were fully adapted to the industrial environments and feature profiles of wireless communication in the machinery and process plant industry.

#### A modular system for wireless switchgear

The result: today the business field "Wireless" is able to provide the machinery and process plant industry with numerous different designs of wireless switchgear – e.g. position switches, foot switches, pull-wire switches and different types of operating device. Each device can be combined with different wireless technologies. Furthermore, this technology offers a solid platform which meets customer-specific requirements of wireless systems with relatively little effort.

This is why the business field Wireless will continue to expand its range, as well as to open up new applications for wireless switchgear in collaboration with its customers.

// SURFING THE RIGHT WAVE

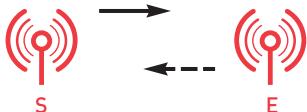

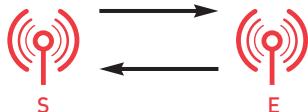

sWave®

### sWave® by steute Wireless

Wireless communication opens up new possibilities e.g. for the design of man-machine interfaces. We recognised this early on and can now look back on nearly ten years' experience in the design of wireless switchgear. Technology platforms and wireless standards have been developed which are perfectly adapted to their application

fields. One development focus is the »Energy Harvesting« principle: the switching devices generate the energy required for the transmission of wireless signals themselves – for example via a solar module or a robust electrodynamic energy generator. For demanding industrial applications different wireless technologies are available:

sWave® 868/915 MHz	sWave® 2.4 GHz	sWave® 2.4 GHz-safe
		
Battery	Battery LongLife	Rechargeable Battery
		
Energy Generator	-	-
	-	-
		

### sWave® 868 / 915-e MHz self-sufficient, bi-directional

Wherever movable parts of machines and plants need to be positioned, controlled and monitored, cables are undesirable or a hindrance, reducing the viability of the plants. The solution: wireless, self-sufficient command devices which are applied to authorise solenoid interlocks on safety fences and protective guards. Wireless position switches which position, control and monitor machines and plants.

### sWave® 868 / 915-b MHz battery-operated, bi-directional

#### Application field wireless technology

Industrial sensors, for example wireless inductive sensors, GMR sensors or optical wireless sensors, require additional energy for operation. These sensors draw their energy from a powerful longlife battery integrated in the sensors (e.g. position switches, operating devices, non-contact wireless sensors).

#### Special features:

- Bi-directional self-sufficient wireless path
- High sensing range: up to 60 m inside buildings and 700 m in the free field
- No interference with DECT, WLAN, PMR systems etc.
- Good integration in automation systems
- Short telegrams (small duty cycle) lead to low collision probability
- Also possible with battery operation
- Non-contact wireless sensors possible.

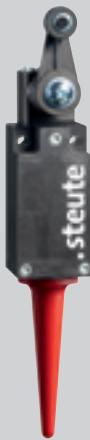

#### LBT – Listen-Before-Talk

With sWave® 868 / 915-e MHz and sWave® 868 / 915-b MHz the switching or sensor information is transmitted directly after a status change at the switching input. If the wireless switch receives no confirmation of the transmission from the receiver, after a short time it will try to resend the information. If this transmission is also unsuccessful, no further attempt will be carried out and the switching information will be »lost«.

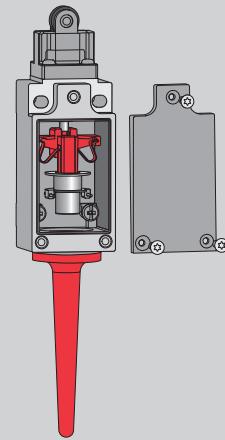

Wireless switches and sensors with battery supply can be additionally operated in the LBT mode. Because a jammer only interferes with the air interface for milliseconds, transmission reliability should be improved by checking the wireless interface before transmission. If the interface is vacant, the signal can be transmitted. If the interface is occupied by another jammer on the same frequency or another transmitter in the same wireless network, the transmission is reattempted as soon as the interface is vacant again.

This check is carried out up to six times, depending on how long the interface is blocked. If after approx. 200 ms transmission is not possible, the wireless telegram is definitely sent.

Wireless switches and sensors with this technology are marked in our catalogue with - LBT.

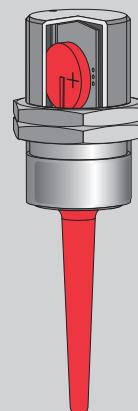

The antenna and wireless module are integrated in the wireless switches or sensors. The special characteristics of the products remain preserved: high degree of protection, low/high temperature durability -25 °C up to +65 °C, corrosion resistance, gas Ex zones 1 and 2, dust Ex zones 21 and 22.

Electrodynamic energy generator, energy from the switching process (keystroke): the wireless modules from steute are based on a miniature energy generator, ultra low-power electronics and reliable wireless technology. Through the combination of miniaturisation, energy harvesting and highly efficient wireless technology, maintenance-free wireless sensor solutions for applications inside buildings and industrial plants are possible.

Bi-directional wireless sensors based on the Hall effect or as inductive sensors have an especially long battery life of several years because of their very low power consumption in stand-by mode.

sWave® 868 and 915 are optimised for ultra-low power consumption. Longlife batteries provide the energy source for non-contact sensors or for periodically transmitted status signals. Battery management is not required for several years.

### sWave® 2.4 GHz

#### Application field wireless technology

Wireless foot switches have many advantages in machine and plant engineering, for different reasons. On the one hand, cables are dangerous tripping hazards; on the other hand, cables restrict ergonomic comfort because the operator cannot position the foot switch freely in front of the machine. This technology, operating on the license-free 2.4 GHz frequency band, offers high reliability and robustness.

#### Wireless Coexistence

Most of the wireless technologies in use today operate on the 2.4 GHz frequency band. Devices using these wireless technologies have become an integral part of the existing infrastructure in offices and production lines. In cases where WLAN, IEEE 802.15.4 (ZigBee) and sWave® 2.4 must be operated in parallel, the 2.4 GHz frequency band is working to full capacity (see Fig. on the right side). Through a special procedure a coexistence with sWave® and other technologies is secured to the greatest possible extent (see picture on the right).

#### Special features:

- Specific wireless system for high reliability
- Energy-saving 2.4 GHz wireless technology
- Short link-up time after »power on« (<200 ms)
- Short data exchange time (20 ms)
- Low power consumption
- Coexistence with WLAN and Bluetooth
- Interference-free parallel operation of several transmission and receiving units through a special »pairing« procedure

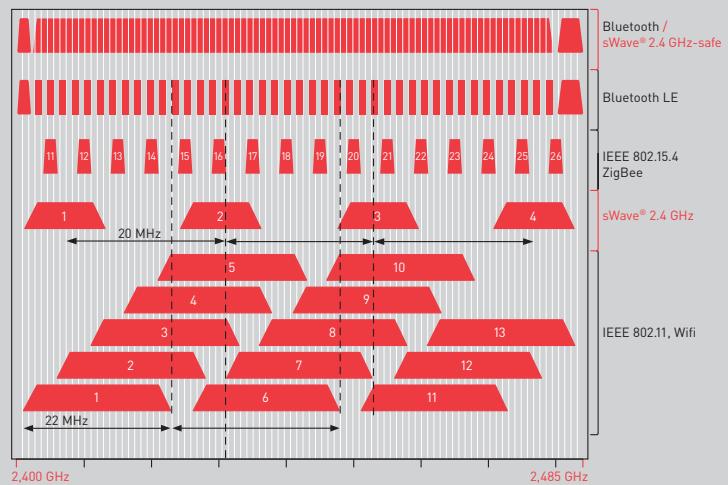

#### Technology

- 2.4 GHz ISM band frequency hopping procedure
- Frequency hopping with FSK procedure with 8 channels in 4 frequency groups
- Licensable worldwide
- No legally stipulated limitation of utilisation time with regard to duty cycle.

Nearly all industrial foot switches from steute can be optionally equipped with the new steute sWave® 2.4 GHz technology. This is also possible for one and two-pedal foot switches. In these cases, a compact module with an integrated antenna is incorporated instead of the cable connection. This module communicates with the receiving unit inside the device.

The signal evaluation is carried out by a receiver inside the switchgear cabinet of the plant. Thus two transmitters can communicate with one receiver.

In order to offer a reliable, manageable and practicable wireless technology, steute has developed the wireless system »sWave® 2.4 GHz«. On the basis of years of experience with different wireless technologies, a new system has been designed with essential advantages: low energy consumption, fast link connection, low costs, long battery life.

The system works on the 2.4 GHz band available worldwide and is divided into 32 channels. The current power consumption of maximum 25 mA is as much as 60% lower than all other wireless standards. High coexistence and reliability are achieved by 32 channel pseudo-random frequency hopping and fourfold data redundancy within 20 ms.

### sWave® 2.4 GHz-safe

#### A new system with essential advantages

On the basis of years of experience with different wireless technologies, a new system has been designed with essential advantages: low energy consumption, fast link connection, low costs, long battery life.

#### All requirements regarding robust and safe application in an industrial environment are met.

The new wireless standard has been especially designed for the requirements of machine and plant engineering. It meets high safety safety standards: Performance level PL d according to EN ISO 13849-1 is achieved in terms of the machinery directive; signal transmission is reliable even in adverse environmental conditions.

#### Compact wireless module

sWave® 2.4 GHz-safe uses the physical level of the standard IEEE 802.15.1. Because of its high reliability, achieved amongst other things by the FHSS procedure (»Frequency Hopping Spread Spectrum«) on 79 channels and the adaptive frequency hopping procedure, and because of its very good interference and coexistence characteristics with regard to other wireless systems, it is especially suitable for application in rough industrial environments.

#### High interference resistance

sWave® 2.4 GHz-safe has been optimised for a sensing range of 15 m, taking into consideration the interference predominating on a production site. Safety-related signals are transmitted wirelessly, without any disturbing cables. The parameters can fall well below or above target, depending on the application.

#### Mobile wireless controls

An sWave® 2.4 GHz-safe Wireless system exists as a complete solution, comprising:

- mobile wireless transmitter, e.g. a wireless foot switch with integrated transmission electronics, including rechargeable battery and transmission antenna
- a wireless receiver that can be parameterised, including evaluation electronics and antenna system.

Safety-related signals are transmitted wirelessly, without any disturbing cables.

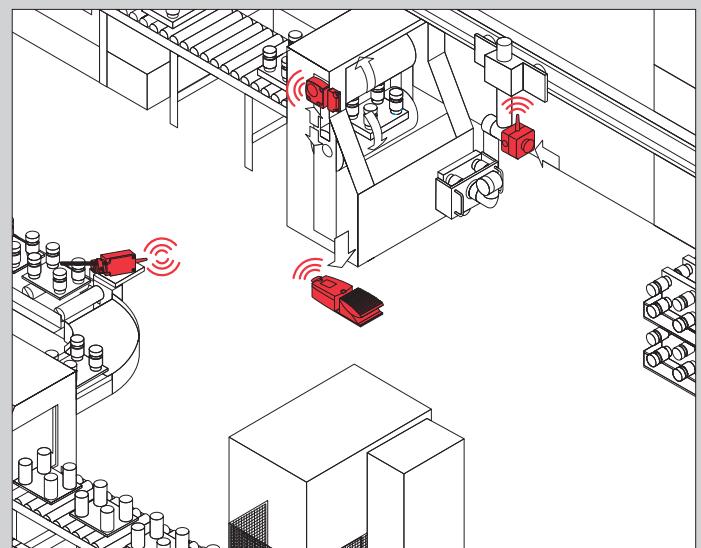

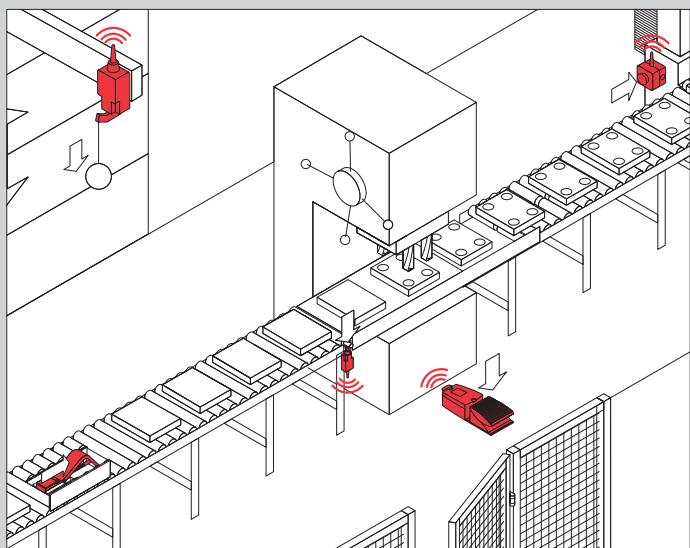

#### Special features:

- Operation on the license-free 2.4 GHz ISM frequency band
- For data communication, a master/slave procedure with FHSS (»Frequency Hopping Spread Spectrum«) is applied
- Interference-free parallel operation with other systems at high system density is possible
- Low transmission power additionally supports this interference-free parallel operation
- High EMC interference resistance in an industrial environment
- Wireless approval for North America (USA/Canada) available.

Wireless safety foot switch  
Type test approved, sWave® 2.4  
GHz-safe: safe and reliable,  
safety level: PL d according to  
EN ISO 13849-1. Protection  
shield against unintentional ac-  
tuation. In order to exclude  
faulty operation, sensors moni-  
tor the position of the switch  
during operation. As soon as it  
is lifted from the ground, the  
system falls into a »fail-safe  
state«.

sWave® safe receiver and evalua-  
tion unit (»master« function, 2  
channels). The unambiguous  
assignment of transmitter and  
receiver is carried out by an in-  
dividual identifier that must be  
parameterised during installa-  
tion of transmitter and receiver.  
This measurement guarantees  
that only one transmitter can  
impact one receiver and vice  
versa.

#### Typical applications

- Operation of machines with movable parts, for example wire machines, machine tools, presses
- Mobile operating and observ- ing, for example during setting service of robots
- Mobile operating of a simple tool and exchange of appli- ances
- Service and maintenance on machines.

### EnOcean®

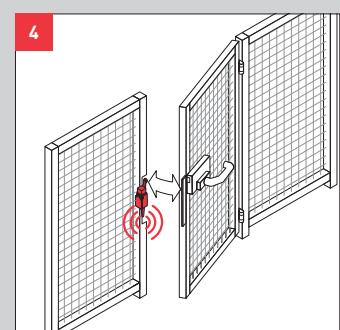

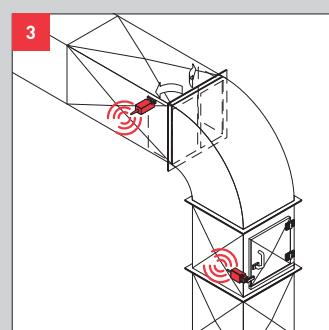

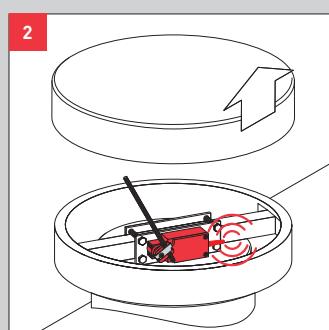

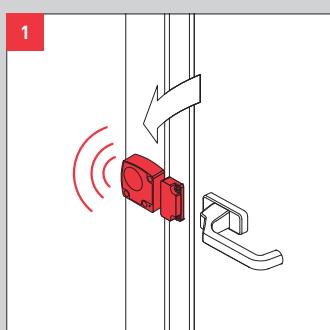

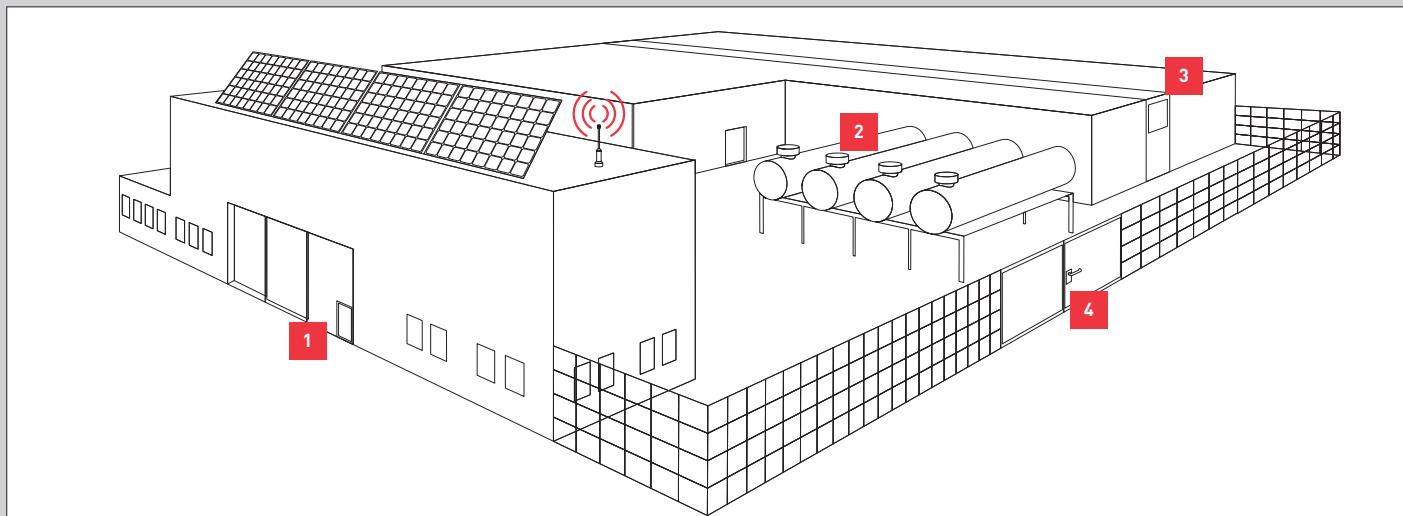

The EnOcean wireless technology has already been established as a technology for green, intelligent buildings and applications. Wherever an interoperability with the EnOcean standard ISO/IEC 14543-3-10 is required for industrial applications, this standard is integrated in our wireless switchgear and sensors. It has been optimised for uni-directional wireless systems, based on an energy harvesting system.

#### EnOcean® – application requirements of this wireless technology

Industrial sensors, for example wireless inductive sensors, GMR sensors or optical wireless sensors, require additional energy for operation. These sensors draw their energy from a powerful longlife battery integrated in the sensor (e.g. position switches, operating devices, non-contact wireless sensors).

#### Special features

- Self-sufficient wireless path
- High sensing range: up to 20 m inside buildings and 200 m in the free field
- Fail-safe wireless transmission in 868 MHz frequency range
- No interference with DECT, WLAN etc.
- Easy system extension to include products from other manufacturers
- Good integration in automation systems
- Short telegrams (small duty cycle) lead to low collision probability
- Also possible with battery operation
- Non-contact wireless sensors possible.
- Available as Ex version for zones 1 and 21

#### Sliding door protection

Sliding door protection by a non-contact wireless wicked door contact

#### Tank monitoring

Protection of inspection and service accesses with Ex-protected wireless switches

#### Position monitoring

Position monitoring of fire protection flaps with wireless position switches

#### Door protection

Door protection at a protective fence by a self-sufficient wireless switch

# Wireless receivers sWave®

## // Series RF Rx SW868/SW915-1W

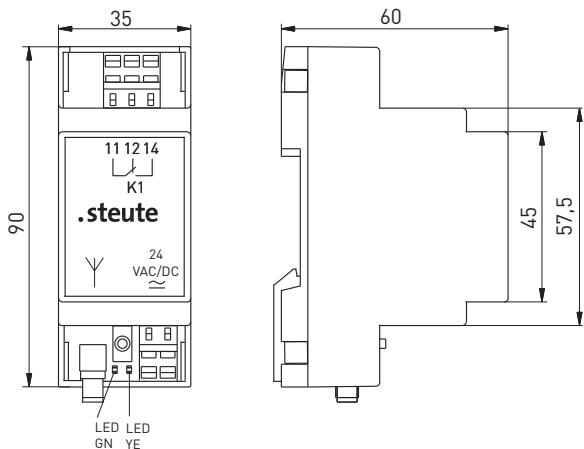

### Features/options

- sWave® technology
- 1 potential-free relay output
- 1 change-over contact, max. 6 A
- Transmitter/receiver assignment by teaching mode
- LEDs for indication of switching state
- SW868: SMA plug-in connector, SW915: SMA reverse plug-in connector for external antenna

## // RF RX SW868/SW915

24

Wireless receiver  
RF Rx SW868-1W 24 VAC/DC  
RF Rx SW915-1W 24 VAC/DC

Material Number  
1190427  
1190428

### Technical Data

Standards	EN 60947-5-1; EN 61000-6-2; EN 61000-6-3; EN 60068-2-6; EN 60068-2-27; EN 301 489-1; EN 301 489-3; EN 300 220-1, -2
Number of channels	1
Mounting	DIN rail mounting
Connection	terminals with CAGE CLAMP WAGO Series 236: 0.08 ... 2.5 mm² AWG 28-12, AWG 12: THHN, THWN, stripping length 5 ... 6 mm/ 0.22 in
Degree of protection	IP 20 to IEC/EN 60529
Inputs	1 wireless channel, max. 10 transmitters per channel
Outputs	1 change-over contact (Relay)
Rated operating current $I_e$	24 VDC: max. 0.03 A; 24 VAC: max. 0.07 A
Rated operating voltage $U_e$	24 VAC/DC -15% ... +10%
$I_e/U_e$ outputs	6 A / 250 VAC; 2 A / 24 VDC
Utilisation category	AC-15; DC-13
$U_i$	250 VAC
$U_{imp}$	2.5 kV
Frequency	868.3 MHz or 915 MHz (USA, Canada and Australia)
Display	green LED for operating state, orange LED for switching conditions
Switching frequency	approx. 12000 telegrams at repetitions/h
Degree of pollution	2 per DIN VDE 0110
Ambient temperature	0 °C ... +55 °C
Note	inductive loads (contactors, relays etc.) are to be suppressed by suitable circuitry.
Approvals	SW915

Type code RF Rx SW868-1W

1 change-over contacts  
868 MHz wireless frequency

# Wireless position switches EnOcean®

## // Series RF 96 EN868

### Features/options

- Thermoplastic enclosure
- Mounting details to EN 50 047
- EnOcean® technology
- No wiring and pipe laying required
- Power supply by Lithium battery
- Easy programming of receiver
- Multi-network capable
- Output signal can be individually configurated at the receiver

### // RF 96 EN868

### Technical Data

Standards	EN 60947-5-1; EN 61000-6-2; EN 301 489-1; EN 301 489-3; EN 300 220-2, -3
Enclosure	Glass-fibre reinforced shock-proof thermoplastic, self-extinguishing UL 94-V0
Cover	Glass-fibre reinforced shock-proof thermoplastic, self-extinguishing UL 94-V0
Tightening torque	max. 1.2 Nm
Degree of protection	IP 67 to IEC/EN 60529
Protocol	EnOcean®
Ambient temperature	- 20 °C ... + 65 °C
Switching frequency	approx. 9000 telegrams at repetitions/h
Voltage supply	Lithium battery (replaceable)
Standby current	15 µA
Capacity	approx. 8.5 Ah
Frequency	868.3 MHz
Transmission power	max. 10 mW
Modulation principle	ASK
Telegram type	RPS type 2
Data rate	120 kbps
Channel bandwidth	280 kHz
Sensing range	max. 300 m outside, max. 30 m im inside
Mechanical life	> 1 million operations
Battery life	approx. 10 years unused, approx. 2000 days with 1 actuation per s, approx. 93800 days with 1 actuation per min.
Actuating time	min. 80 ms
Note	status signal configurable ex works, transmission of battery voltage

## PRODUCTION PROCESS PROCESSING OF ENCLOSURES

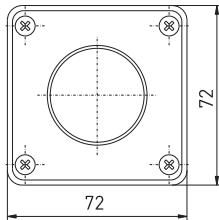

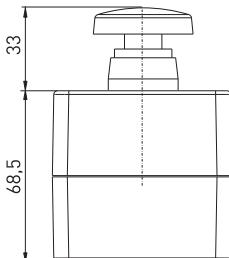

# Wireless command devices EnOcean®

## // Series RF BF 72 EN868

### Features/options

- Thermoplastic enclosure
- EnOcean® technology
- No power supply, no wiring and pipe laying required
- Easy programming of receiver
- Multi-network capable
- Output signal can be individually configured at the receiver

## // RF BF 72 EN868

### Technical Data

Standards	EN 60947-5-1; EN 61000-6-2; EN 301 489-1; EN 301 489-3; EN 300 220-2, -3
Enclosure	Thermoplastic, Polyamid PA 66
Degree of protection	IP 65 to IEC/EN 60529
Protocol	EnOcean®
Ambient temperature	- 20 °C ... + 65 °C
Switching frequency	approx. 9000 telegrams at repetitions/h
Voltage supply	Electrodynamic energy generator
Frequency	868.3 MHz
Transmission power	max. 10 mW
Data rate	120 kbps
Channel bandwidth	280 kHz
Sensing range	max. 200 m outside, max. 20 m inside
Mech. life	> 1 million operations
Actuating time	min. 80 ms
Note	no status signal available

Alternative  
voltage supply  
Note

Lithium battery approx. 2.2 Ah  
status signal configurable ex works

### Technical data

Standards	EN 60947-5-1; EN 61000-6-2; EN 301 489-1; EN 301 489-3; EN 300 220-2, -3
Enclosure	aluminium die-cast, enamel finish, RAL 5011
Pedal	aluminium die-cast, enamel finish, RAL 5011
Protective shield	aluminium die-cast, enamel finish, RAL 2004
Degree of protection	IP 67 to IEC/EN 60529
Protocol	EnOcean®
Ambient temperature	-20 °C ... +65 °C
Switching frequency	approx. 9000 telegrams at repetitions/h
Voltage supply	Electrodynamic energy generator
Frequency	868.3 MHz
Transmission power	max. 10 mW
Data rate	120 kbps
Channel bandwidth	280 kHz
Sensing range	max. 200 m outside, max. 20 m inside
Mechanical life	> 1 million operations
Actuating time	min. 80 ms
Note	no status signal available

Connection	Plug-in connector M12x1, 4 poles
Degree of protection	IP 67 to IEC/EN 60529
Protocol	EnOcean®
Ambient temperature	-20 °C ... +65 °C
Switching frequency	approx. 9,000 telegrams at repetitions/h
Operating cycles	max. 5 Hz
Standby current	15 µA
Voltage supply	Lithium battery (replaceable)
Capacity	8.5 Ah
Frequency	868.3 MHz
Transmission power	max. 10 mW
Modulation process	ASK
Telegram type	RPS type 2
Data rate	120 kbps
Channel bandwidth	280 kHz
Sensing range	max. 300 m outside, max. 30 m inside
Battery life	according to switch frequency, 1 s approx. 780 days, 10 s approx. 1300 days, 100 s approx. 1400 days
Actuating time	min. 80 ms
Note	status signal configurable ex works, transmission of battery voltage

Type code

RF 96 ST EN868

# Wireless universal transmitters sWave®

## // Series RF 96 ST SW868/SW915

### Features/options

- Thermoplastic enclosure
- Mounting details to EN 50 047
- Plug-in connector M12
- sWave® technology
- No wiring and pipe laying required
- Power supply by Lithium battery
- Easy programming of receiver
- Output signal can be individually configured at the receiver

### // Field strength indicator EPM 300 EnOcean®

#### Features/options

- Only suitable for EnOcean® technology
- Mobile field strength indicator for link range testing
- To measure and indicate the electrical field strength
- Battery not included, requires AA/LR91 Lithium battery
- Repeater mode can be selected

Field strength indicators  
EPM 300

Material Number

## // RF Magnet antenna 868 MHz EnOcean®

### Features/options

- RF magnet antenna with straight SMA plug-in connector without ferrite core
- Cable length 2.5 m

### Antennas

RF Magnet antenna EN868

### Material Number

1186143

### Note

The antenna must be mounted on a metal plate of min. 250 x 250 mm size.

## // RF High gain antenna 868 MHz

### Features/options

- RF high gain antenna suitable for mast mounting up to max. 41 mm diametre
- 260 mm length
- N-connector socket
- 5 dbi gain
- internally grinded as lightning protection

### Antennas

RF high gain antenna

### Material Number

1187161

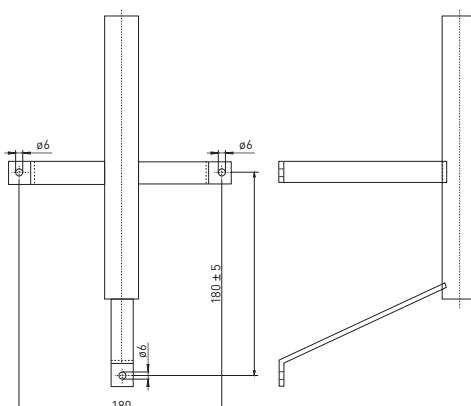

RF SMA N antenna connecting cable 5 m

1187162

RF SMA N antenna connecting cable 10 m

Wireless set  
RF GF SW2.4-safe

Material Number  
1329075

### Note

A set consists of a wireless foot switch, a wireless receiver, a magnetic base antenna, a charging device and a pairing cable.

## Technical data

Standards	EN 60947-5-1; EN 61000-6-2; EN 61000-6-3; EN 61326-3-1; EN 13849-1; EN 61784-3
Enclosure	aluminium die-cast, enamel finish, RAL 5011
Cover	glass-fibre reinforced thermoplastic
Pedal	glass-fibre reinforced thermoplastic
Degree of protection	IP 67 to IEC/EN 60529
Transmission interval	<50 ms
Synchronisation after sleep mode	max. 8 s
Current consumption active	approx. 35 mA
Current consumption	sniff mode: approx. 12 mA; sleep mode: approx. 1 mA
Voltage supply	Lithium ion battery, 3.7 V / 2.25 Ah
Battery life	after 300 charging cycles 80 % residual capacity
Ambient temperature	-20 °C ... +65 °C
Mechanical life	> 1 million operations

## Technical data

Standards	EN 300 440 -1 V1.3.1; EN 300 440 -2 V1.1.2; EN 301 489 -1 V1.6.1; EN 301 489 -3 V1.4.1; EN 60950; EN 50371; USA: FCC, Part 15C, single modular, FCC-Identifier: XK5-SW100AMBINT; Canada: RSS-210 Issue 7, 5158A-SW100AMBINT
Mounting Connection	DIN rail mounting terminals with CAGE CLAMP WAGO Series 236: 0.08 ... 2.5 mm² AWG 28-12, AWG 12: THHN, THWN, stripping length 5 ... 6 mm / 0.22 in
Degree of protection	IP 20 to IEC/EN 60529
Rated operating current $I_e$	max. 0.21 A
Rated operating voltage $U_e$	24 VDC -15 % ... +10 %
Inputs	2 transmitters per receiver
Outputs	4 change-over contacts (Relays), K4 is used as validate relay
$I_e/U_e$ of output contacts	6 A / 250 VAC; 2 A / 24 VDC
Utilisation category	AC-15; DC 13
Frequency	2.4 ... 2.4835 GHz
Output power	- 6 dBm e.i.r.p [0 dBm at 50 Ω]
Input sensitivity	max. -98 dBm [-104 dBm at 50 Ω]
Display	green LED for operating state, yellow LED for switching conditions
EMC rating	acc. to EMC directive
Degree of pollution	2 per DIN VDE 0110
Ambient temperature	0 °C ... +55 °C
Storage and transport-temperature	-25 °C ... +85 °C
Note	inductive loads (contactors, relays etc.) are to be suppressed by suitable circuitry.

RF magnet antenna with SMA plug-in connector available as accessory material No. 1186917

# Wireless technology 2.4 GHz

## // Accessories

### // RF magnet antenna 2.4 GHz

#### Features/options

- RF magnet antenna with straight SMA plug-in connector without ferrite core
- Cable length 1 m
- Order unit: 1 piece

#### Antennas

RF Magnet antenna 2.4 GHz

#### Material Number

1186917

#### Note

The antenna must be mounted on a metal plate of min. 250 x 250 mm size.

### // RF SMA antenna socket

#### Features/options

- RF SMA antenna socket with straight SMA plug-in connector
- Cable length 0.5 m
- Order unit: 1 piece

#### Antenna sockets

RF SMA antenna socket

#### Material Number

1185712

### // RF SMA antenna extension

#### Features/options

- RF SMA antenna extension cable with straight SMA plug-in connector
- Cable length 3 m
- Order unit: 1 piece

#### Antenna extensions

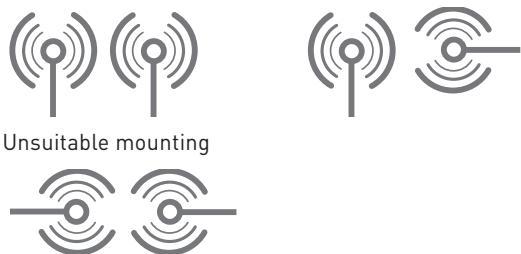

RF SMA antenna extension cable 3 m

#### Material Number

1186734

## // Antenna arrangement

Arrangement of receiver and switch antenna  
Optimum mounting      Possible mounting

## // 24 VDC power supply

### Features/options

- 24 VDC power supply for wireless receivers RF Rx ...

### Power supplies

Power supply 24 VDC

steute develops and manufactures safe switchgear for demanding and critical application. Besides a comprehensive standard range of products for »Wireless, Automation, Extreme and Medictec« applications, we also and increasingly develop customised switchgear for extreme conditions in all four business fields. Some examples: emergency pullwire

switches for the mining industry, position switches for industrial automation and control panels for laser surgery. Our head office is in Löhne, Westphalia, Germany; worldwide sales are conducted through steute's subsidiaries and trading partners.
